UNIVERSITI TEKNIKAL MALAYSIA MELAKA

VISION

To Be One of the World's Leading Innovative and Creative Technical Universities

MISSION

UTeM is committed to pioneer and contribute towards the prosperity of the nation and the world by;

1. Promoting knowledge through innovative teaching and learning, research and technical scholarship.
2. Developing professional leaders with impeccable moral values.
3. Generating sustainable development through smart partnership with the community and industry.

MOTTO

Excellence Through Competency

GENERAL EDUCATIONAL GOALS

1. To conduct academic and professional programmes based on relevant needs of the industries.
2. To produce graduates with relevant knowledge, technical competency, soft skills, social responsibility and accountability.
3. To cultivate scientific method, critical thinking, creative and innovative problem solving and autonomy in decision making amongst graduates.
4. To foster development and innovation activities in collaboration with industries for the prosperity of the Nation.
5. To equip graduates with leadership and teamwork skills as well as develop communication and life-long learning skills.
6. To develop technopreneurship and managerial skills amongst graduates.
7. To instill an appreciation of the arts and cultural values and awareness of healthy life styles amongst graduates.

DEAN WELCOMING SPEECH

Bismillahir Rahmanir Rahim

Assalamu'alaikum and a Very Good Day

All praises are due to Allah s.w.t, the most Gracious, and with His Mercy the Academic Handbook of Diploma and Bachelor Degree for the Academic Session of 2019/2020 has been successfully published by the Faculty of Electrical Engineering, Universiti Teknikal Malaysia Melaka.

First, I would like to congratulate all new students on your admission to UTeM and welcome to Faculty of Electrical Engineering. I can assure you that you have come to the right Institution of Higher Learning (IHL) and an exciting learning experience awaits you at this faculty.

In line with the faculty's motto "Towards Academic Excellence", we strive hard to produce a competent, capable, knowledgeable and ethical human capital that is able to assist the government and the industry in pushing our country towards better economy and lifestyle. In order to achieve this, the faculty has implement Outcome Based Education (OBE) curriculum since July 2010. We hope this approach will better equip our students with the required skills upon their graduation.

This year, the faculty offers three (3) undergraduate programmes; i.e.: two (2) bachelor programs and one (1) diploma program. The Diploma of Electrical Engineering (DEK) will focus on practical aspect and fulfills the requirement of Engineering Technology Accreditation Council (ETAC) for accreditation. For our degree programs, the faculty still maintains new intake for both Bachelor of Electrical Engineering (BEKG) and Bachelor of Mechatronics Engineering (BEKM) programs. The Bachelor of Electrical Engineering (BEKG) is a broad-based program where the specialization starts in semester 6 of the program. On the other hand, Bachelor of Mechatronics Engineering (BEKM) program focuses more on the mechatronics systems design and analysis. These bachelor programs have fulfilled the Board of Engineers (BEM) requirement for an engineering program that is accredited by the Engineering Accreditation Council (EAC).

This handbook provides a brief overview about the faculty, curriculum structure, academic advisory system, university grading system and syllabus contents of various programs; which serves as a reference for the new intake of Academic Session of 2019/2020. Hopefully, it will provide guidance for students in

planning their studies systematically in order to achieve academic excellence and eventually graduate on time with good grades.

Last but not least, I would like to extend my thanks and gratitude to all the committee members for their hard work, support and effort towards publishing this handbook.

Wassalam.

“Towards Academic Excellence”

ASSOCIATE PROF. IR. DR. MD NAZRI BIN OTHMAN

Dean,
Faculty of Electrical Engineering
Universiti Teknikal Malaysia Melaka

FACULTY ORGANISATION STRUCTURE

FACULTY AT A GLANCE

Faculty of Electrical Engineering (FKE) was established in early 2001 and officially began to operate from 22nd June 2001 after obtaining an authorization from Malaysia Ministry of Education. Initially, the faculty's temporary campus was situated at Taman Tasik Utama, Ayer Keroh and later was allocated to the UTeM's main campus at Durian Tunggal.

In order to uphold the academic pillar that being decended to the faculty, a managerial team leaded by Dean was established and assisted by three (3) Deputy Deans, three (3) Heads of Department, three (3) Program Coordinator and two (2) Senior Assistant Registrar. Other than that, the combination of lecturers that excel in various fields provide a strong academic background inside faculty as well as high commitment in educating our new generation to become outstanding graduates that equipped with knowledge, technical competencies and well versed soft skills.

The Faculty of Electrical Engineering offers three (3) Undergraduate Programmes and three (3) types of Postgraduate Programmes:

Undergraduate Programmes:

1. Bachelor of Electrical Engineering (BEKG)
2. Bachelor of Mechatronic Engineering (BEKM)
3. Diploma of Electrical Engineering (DEK)

Postgraduate Programmes:

1. Electrical Engineering & Mechatronic Engineering (Research Mode)
 - a) Doctor of Philosophy (Ph. D)
 - b) Doctor of Engineering (D. Eng)
 - c) Master of Science (M.Sc.)
2. Electrical Engineering (Mixed-Mode)
 - a) Master of Electrical Engineering (Industrial Power) - MEKP
3. Electrical Engineering (Taught Course Mode)
 - a) Master of Electrical Engineering – MEKG
 - b) Master of Mechatronics Engineering – MEKH

FACULTY MISSION, MOTTO AND OBJECTIVES

FACULTY'S MISSION

The Faculty's mission is to provide quality technical education and professional services through broad-based knowledge, innovation and creativity based on expertise and latest technology in enhancing excellent work culture, mutual understanding and cooperation while upholding moral values in line with the national aspirations.

FACULTY'S MOTTO

Towards Academic Excellence

FACULTY'S OBJECTIVES

1. To conduct academic programs recognized by professional bodies that meet the global standards.
2. To produce competent and responsible professionals.
3. To provide balanced academic programs in terms of theory and practical based on Outcome Based Educations (OBE).
4. To enhance smart partnerships between the Faculty with the industry through services, consultancies, and research activities.
5. To create a conducive teaching and learning environment.
6. To produce knowledgeable, outstanding visionary individuals instilled with moral values.
7. To promote a culture of publication amongst academics.

CURRICULUM STRUCTURE

DIPLOMA PROGRAMME

During the first year of study, the student will be equipped with fundamental courses such as mathematics, science and computer programming to provide the foundation for learning engineering courses. The student also taking introduction of electrical and electronic courses. After that, during the second year, the student shall continue learning core programme courses and undertake the diploma project. Finally, during the third year, students are required to undergo an Industrial Training for 16 weeks.

BACHELOR PROGRAMMES

The Faculty of Electrical Engineering (FKE) offers full time 4-year undergraduate programmes leading to the degree award of Bachelor of Electrical Engineering and Bachelor of Mechatronic Engineering. The curriculum has been developed in-line with the University's and Faculty's missions and the Program Educational Objectives (PEO)s. The academic curriculum aims of producing competence graduates that satisfy the industry needs. In addition, the effectiveness and quality of the curriculum through the educational content, teaching and learning are constantly monitored with appropriate assessment methods.

The academic curriculum of the Bachelor Programmes consists of both engineering and non-engineering courses. The key elements of the curriculum include the laboratory work, industrial training, capstone projects and final year projects. In addition, engineering application, integrated exposure to professional engineering practice, including management and professional ethics are also part of the programme's curriculum. In order to expose the students to engineering practice, technical talks by guest lecturers from industry, industry visits, and courses on professional ethics and conduct, are also included.

The University's compulsory courses included English for Academic Purpose, Academic Writing and English for Professional Interaction, Ethnic Relation, and Tamadun Islam dan Tamadun Asia. On the other hand, students are exposed to the third language, engineering management skills, entrepreneurship, communication skills, co-curricular activities and personality development in order to produce engineers who are competent and able to work independently with positive attitudes.

The University offers professional certification preparatory course to increase the value and marketability of the graduates, relevant to the needs of the industries. The objectives of this course are

- To increase the student competency in skills that are relevant to his / her future career;
- To increase the student competitiveness in securing jobs after graduation;
- To support the University initiative in producing holistic and balanced graduates in line with the first shift of the Malaysia Education Blueprint 2013-2025.

The professional certification preparatory course is compulsory for all bachelor degree students registered with the University starting from 2017/2018 intake and onwards. The students are expected to choose, register and complete one (1) professional certification preparation course before the end of their study. The Faculty will offer Basic Hydraulic Technology Certification Course (BEKG 4710) starting from session 2018/2019.

As one of the world leading specialists for Drive and Control technology, Rexroth has a unique technologic expertise to be transferred to participants worldwide. Endorsed by the Drive & Control Academy Würzburg in Germany, a Basic Hydraulic Technology certification course provides participants with a basic hydraulic technology. In this certification course, participants will have experienced fundamental knowledge in hydrostatics, design of a hydraulic systems, graphical symbols, hydraulic fluids, hydraulic pumps and motors, hydraulic cylinders and hydraulic valves. Industrial related project will be exposed to the participants in order to imitate the real industrial environment employing hydraulic technologies. The duration of this course is 3 days.

On top of that, faculty offers professional certification preparatory course for Electrical Energy Management that embedded in the Energy Utilization and Conservation course (BEKP 4853). The course is outlined and approved by Suruhanjaya Tenaga and the students will benefit from the full appreciation of the regulation and develop the management skills required for an Energy Manager towards facilitating the green aspiration of our nation. Students who obtained at least grade B+ in the Energy Utilization and Conservation course and CGPA ≥ 2.5 will be awarded with a Certificate of Energy Management. Graduates who hold this certificate can apply to be a Registered Electrical Energy Manager (REEM) certified by the Suruhanjaya Tenaga with the following additional requirements:

- i. one (1) year of working experience in the related field and
- ii. submit a report related to item (i)

ADMISSION REQUIREMENTS

MINIMUM REQUIREMENTS TO REGISTER IN DIPLOMA PROGRAMME

FOR SPM HOLDERS

General Requirements	1. Citizen of Malaysia; and 2. Pass in Sijil Pelajaran Malaysia or its equivalent with at least FIVE (5) credits including Bahasa Melayu/ Malaysia
Programme Specific Requirements	1. Fulfilled the Universities General Requirements with FOUR (4) credits (Gred C) in the following subjects: • Mathematics • Additional Mathematics • Physics And either one (1) of the following subjects: • Additional Science/ Applied Science • Science • Chemistry • Biology • Engineering Technology • Principle of Electrical and Electronic • Application of Electrical and Electronic • Engineering Technology or Mechanical or Electrical & Electronics Engineering Studies • Electrical Automation and Diesel • Computerize Machine • Engineering Drawing • Visual Arts or Invention and 2. Pass at least (Gred E) in English Language and 3. The applicant must not a colour blind or physically disabled which impair to complete practical assignments.

MINIMUM REQUIREMENTS TO REGISTER IN BACHELOR PROGRAMMES

FOR DIPLOMA/EQUIVALENT HOLDERS

Universities General Requirements

Pass in **Sijil Pelajaran Malaysia (SPM)** / equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or Bahasa Melayu/Bahasa Malaysia July paper

and

Diploma or other qualification recognised as equivalent by the Government of Malaysia and approved by the University's Senate

or

Pass in **Sijil Tinggi Persekolahan Malaysia (STPM)** year 2016 or previous **STPM** with at least:

- **C Grade (NGMP 2.00)** in General Studies; and
- **C Grade (NGMP 2.00)** in **two (2) other subjects** or

Pass in **Matriculation 2016** or previous examination with **at least a CGPA of 2.50**

and

Obtained at least Band 2 in the Malaysian University English Test (MUET).

FOR DIPLOMA/EQUIVALENT HOLDERS

Programme Specific Requirements

Pass in **Diploma** with at least a **CGPA of 3.00** in a related field from a recognised institution and approved by the University's Senate; and

Credit exemption is subject to the discretion and approval by the Faculty and

Pass/ completed studies at Diploma level before the commencement of academic session or

Pass in **Sijil Tinggi Persekolahan Malaysia (STPM) year 2016 or previous STPM** with at least **C Grades (NGMP 2.00)** in all of the following subjects:

- General Studies
- Physics /Biology
- Mathematics T/Further Mathematics T/ Mathematics S
- Chemistry

The applicant who did not take Physics at STPM level must has pass in Sijil Pelajaran Malaysia (SPM)/ equivalent with at least **4B** in Physics, or

Pass in **MOE Matriculation/ UM Foundation/ UiTM Foundation year 2014 or previous STPM** with at least **C Grades (NGMP 2.00)** in **all** of the following subjects:

- Physics / Engineering Physics/Biology
- Mathematics T/Further Mathematics
- Chemistry / Engineering Chemistry

The applicant who did not take Physics at STPM level must has pass in Sijil Pelajaran Malaysia (SPM)/ equivalent with at least **4B** in Physics and

The applicant must not be colour blind or physically disabled which impairs to complete practical assignments.

FOR MATRICULATION HOLDERS

Universities General Requirements	Pass in Sijil Pelajaran Malaysia (SPM) / equivalent with a credit in Bahasa Melayu/Bahasa Malaysia or Bahasa Melayu/Bahasa Malaysia July Paper; and Pass in MOE Matriculation/ UM Science Foundation/ UiTM Foundation with CGPA of at least 2.50; and Obtained at least Band 2 in the Malaysian University English Test (MUET).
Programme Specific Requirements	Obtained at least C Grade (NGMP 2.00) in MOE Matriculation/ UM Science Foundation/ UiTM Foundation in all of the following subjects: • Mathematics / Engineering Mathematics • Chemistry / Engineering Chemistry / Engineering Science • Physics / Engineering Physics / Biology / Electrical and Electronic Engineering Studies and The applicant who did not take Physics at STPM level must has pass in Sijil Pelajaran Malaysia (SPM)/ equivalent with at least 4B in Physics. and The applicant must not be colour blind or physically disabled which impairs to complete practical assignments.

FOR STPM HOLDERS

Universities General Requirements	Pass in Sijil Pelajaran Malaysia (SPM) / equivalent with a credit in Bahasa Melayu / Bahasa Malaysia or a credit in Bahasa Melayu / Bahasa Malaysia July Paper; Pass in Sijil Tinggi Persekolahan Malaysia (STPM) with CGPA of at least 2.50 and obtained at least: • C Grade (NGMP 2.00) in General Studies; and • C Grade (NGMP 2.00) in two (2) other subjects, and Obtained at least Band 2 in the Malaysian University English Test (MUET).
Programme Specific Requirements	Pass in Sijil Tinggi Persekolahan Malaysia (STPM) with at least C Grade (NGMP 2.00) in all of the following subjects: • Mathematics T/Further Mathematics T/ Mathematics S • Chemistry • Physics/Biology and The applicant who did not take Physics at STPM level must has pass in Sijil Pelajaran Malaysia (SPM)/ equivalent with at least 4B in Physics. and The applicant must not be colour blind and not physically disabled which impairs to complete practical assignments.

GRADING SYSTEM

Student's performance in every course is evaluated based on the grade obtained. Grading system is shown in **Table 1**.

Generally, minimum passing grade for a course is Grade D. However, grade D up to C- are categorized as conditional pass and the students are allowed to improve their grade by repeating the course only once.

Table 1: Grading System and Point

Grade (Achievement)	Relations between Marks Percentage and Grade Point	
	Marks Percentages	Grade Point
A (Excellent)	80 – 100	4.0
A- (Excellent)	75 – 79	3.7
B+ (Honours)	70 – 74	3.3
B (Honours)	65 – 69	3.0
B- (Pass)	60 – 64	2.7
C+ (Pass)	55 – 59	2.3
C (Pass)	50 – 54	2.0
C- (Conditional Pass)	47 - 49	1.7
D+ (Conditional Pass)	44 – 46	1.3
D (Conditional Pass)	40 – 43	1.0
E (Fail)	0 - 39	0.0

GRADUATION REQUIREMENT

PROGRAMME	GRADUATION REQUIREMENT
Diploma of Electrical Engineering	Award of a Diploma will be made in two (2) regular semesters. Students are only eligible to be awarded a Diploma after the following conditions are met: - Students must obtain Kedudukan Baik (KB) in the last semester. - Minimum credit hours requirements for the award of a Diploma is 90 credits which consists of 70 credits of Core Program (P) courses including 8 credits of Industrial Training, 14 credits of Compulsory University (W) courses and 6 credits for Elective (E) courses. - Has applied for the award, recommended by the Faculty and approved by the Senate. - Other requirements set by the university.
Bachelor of Electrical Engineering	Award of a Degree will be made in two (2) regular semesters. Students are only eligible to be awarded a Degree after the following conditions are met: - Students must obtain Kedudukan Baik (KB) in the last semester. - Passed all courses required for curriculum requirements: - Minimum credit hour requirements for the award of a Degree is 135 credits hour which consists of 108 credits of Core courses (P), 9 credits of Elective Program (E) courses, 4 credits of Elective University (E) courses, 5 credits of Industrial Training (P) and 14 credits of University Requirements (W) courses. - Has applied for the award, recommended by the Faculty and approved by the Senate. - Other requirements set by the university.
Bachelor of Mechatronics Engineering	Award of a Degree will be made in two (2) regular semesters. Students are only eligible to be awarded a Degree after the following conditions are met: - Students must obtain Kedudukan Baik (KB) in the last semester. - Passed all courses required for curriculum requirements: - Minimum credit hour requirements for the award of a Degree is 135 credits hour which consists of 106 credits of Core courses (P), 6 credits of Elective Program (E) courses, 4 credits of Elective University (E) courses, 5 credits of Industrial Training (P) and 14 credits of University Requirements (W) courses. - Has applied for the award, recommended by the Faculty and approved by the Senate. - Other requirements set by the university.

GRADUATES CAREER PROSPECTS

DIPLOMA IN ELECTRICAL ENGINEERING

Demands for semi-professional level labour forces that are trained in electrical engineering are extremely high especially in the industrial sector. To respond to that, UTeM's Electrical Engineering diploma graduates are groomed with practical and application oriented knowledge so that they will be highly competitive in fulfilling the workforce markets.

BACHELOR IN ELECTRICAL ENGINEERING AND MECHATRONICS ENGINEERING

Vacancies within the industries for engineers that are skilled and practical-oriented is on the rise. Lots of highly trained workforces in the entire engineering sector including Industry Power, Control, Instrumentation and Automation, Power Electronics and Drive and Mechatronics in professional level are required. Job opportunities for UTeM graduates in these fields will be more desirable by the industry once they have been equipped with the technical knowledge and strong practical skills.

Field of works for Bachelor of Electrical Engineering and Mechatronics Engineering graduates include:

- Semiconductor manufacturing industries
- Electrical items manufacturing
- High and Low Voltage components manufacturing
- Renewable Energy sector
- Oil and Gas Industries
- Consultancies Companies
- High technology industries such as aerospace industries
- Automation System manufacturing industries
- Biomedical Engineering Firms
- Software Development Sector
- Research and development Sector

Some of the career fields that are suitable include Process and Manufacturing Engineer, Design and Research Engineer, Consultancies Engineer, Testing and Quality Engineer, System Engineer and Academicians.

SOFT SKILLS (KI)

Soft skills can be defined as the generic skills which have been identified as very critical in the global working environment apart from the fast pace of technological advancement.

The elements of Soft Skills that must be developed and implemented by each student are as follows:

1. Communication Skills (CS)
2. Creative Thinking and Problem Solving Skills (CTPS)
3. Teamwork Skills (TS)
4. Continual Learning and Information Management (LL)
5. Entrepreneurship Skills (ES)
6. Professional Ethics and Moral Values (EM)
7. Leadership Skills (LS)

Structure of Soft Skills Development in Institutional of Higher Learning Education:

1. Soft Skills Development via Formal Teaching and Learning Activities:
 - Stand Alone Course Model
 - Embedded Model
 - Combination of Embedded Model & Stand-Alone Course Model
2. Soft Skills Development via Supporting-Oriented Programme
 - Academic-Focused Supporting Programme
 - Non-Academic-Focused Supporting Programme
3. Soft Skills Development via Campus Activities and Lifestyle
 - Residential College
 - Campus Environment

ACADEMIC ADVISORY SYSTEM

In UTeM students are free to take courses offered by the Faculty at every semester based on their capability, as long as they comply with the rules and regulations set up by the Faculty and university academic rules. Students need to plan their own study carefully with the guide of their Academic Advisor during their study in the university.

CHARACTERISTICS OF THE SEMESTER SYSTEM

- Students are free to take any courses offered in each semester sequentially based on their ability and conditions of course selection determined by the Faculty and university's academics regulations.
- Students should plan programs of study and learning appropriate which will need the advices from Academic Advisor during the studies.
- Students who obtained **UM (Ulang Mata pelajaran)** status for a given course (GRED E), should retake the course in the following semester or when offered by the faculty.

THE IMPORTANCE OF AN ACADEMIC ADVISOR (PA)

- Students need to be given a proper advice in term of courses taken under the semester system, where they are free to determine the number of courses to be taken based on their capability or in the case the student obtained a Conditional Position in the previous semester. They need to plan carefully to take courses which are suitable for them to carry and fully aware on its implication to their whole study period in the university.
- Semester system is a flexible system for a student with high, moderate or less capability to complete their study based on their own capability comply to the maximum study period set up by the university.
- The Academic Advisor is able to provide an advice not only in the academic matter, but also in the aspects of how the students can adapt themselves to the semester system, culture shock of studying in the university, time management and private matters that may affect the students' study performance.
- In the condition where the student is not with the same batch of other students during the study period due to difference in the courses taken, difficulty may be expected for him/her to discuss on the matter of study with the others. Here, the Academic Advisor is importance to provide a proper guidance.

ROLES AND RESPONSIBILITIES OF STUDENT AND ACADEMIC ADVISOR/ PENASIHAT AKADEMIK (PA) IN THE ACADEMIC ADVISORY SYSTEM ARE AS FOLLOW:

Roles/Responsibilities of Academic Advisor/ Penasihat Akademik (PA)	Roles/Responsibilities of Student
• Conduct a meeting with the students at least two times for every semester.	• Always be open minded when meeting with the Academic Advisor.
• Make sure to student understand the academic system in UTeM.	• Attend meeting with the Academic Advisor at least two times for every semester.
• Provide an advice and make sure student's courses registration is based on his/her current academic result.	• Make the Academic Advisor as a mentor and always get an advice on the academic matter.
• Supervise the student study progress and provide guidance in making a good study planning.	• Make sure to have a good understanding on the academic system.
• Provide student to always be motivated in their study etc.	• Provide a copy of examination result to the Academic Advisor at each semester.
• Supervise the student record and file to be always updated – make sure no course is missed to fulfil the requirement for degree award.	• Get the certification of registration form, copy of certificates and reference letter from the Academic Advisor.
• Refer the student to the head of department for further action if necessary.	• Always keep a record on all courses that already been taken during the period of study to prevent missed course and fulfill the requirement for degree award.
• Advice & monitor the student to keep record of their obtained grades for a given course as shown in Appendix A, B & C (Student Audit Form).	• Students are required to keep record of their obtained grades for a given course as shown in Appendix A, B & C (Student Audit Form).

FLOW OF ACADEMIC ADVISORY SYSTEM IN UTeM:

1. Academic Advisor/ Penasihat Akademik (PA)
2. Head of Department
3. Deputy Dean (Academic)
4. Dean

List of Industrial Advisory Panel

INDUSTRIAL ADVISORY PANEL	POSITION	APPOINTMENT PERIOD
Ir. Mohd Tajudin Romli (BEKG)	Managing Director, RMS ENGINEERING SDN. BHD.	1 September 2019 to 31 August 2021
En. Mohammad Faizal Ali (BEKG)	Chief Executive Officer, Vectolabs Sdn. Bhd.	1 September 2019 to 31 August 2021
Ir. Zaki Kudus (BEKG)	Chief Executive Officer, AHAR Consultants.	1 September 2019 to 31 August 2021
Ir. Mohd Yusrizal Mohd Yusof (BEKG)	Managing Director, TNB	1 September 2019 to 31 August 2021
Ir. Ts. Mohd Azlan bin Othman (BEKG)	Head of Electrical Unit, JKR	1 September 2019 to 31 August 2021
Ir. Dr. Harriezan Ahmad (BEKG)	Manager, TNB	1 September 2019 to 31 August 2021
Chai Seang EE (BEKG)	Factory Manager, Hitachi Cable (Johor) Sdn. Bhd.	1 September 2019 to 31 August 2021

Dr. Ir. Kenny Ang Teoh Ong (BEKG)	Director, Control Easy Technology Sdn. Bhd.	1 September 2019 to 31 August 2021
Ir. Rajmal Buang (BEKG)	Managing Director, RBW Engineering	1 September 2019 to 31 August 2021
Ir. Effendy Bin Muhamad @ Muhamad Yasin (DEK)	Principal Electrical Engineer, ENHILL Consultant	1 September 2019 to 31 August 2021
Ir. Azizi Ahmad (DEK)	HOD / Principal Engr. - Instrumentation, Control and Telecommunication, Ranhill WorleyParsons	1 September 2019 to 31 August 2021
Ir. Dr. Iryani Mohamed Rawi (DEK)	Head (Product Certification), TNB	1 September 2019 to 31 August 2021

DIPLOMA PROGRAMME

An orange rounded rectangle button with a double border and a slight shadow.

DIPLOMA IN ELECTRICAL ENGINEERING (DEK)

DIPLOMA IN ELECTRICAL ENGINEERING (DEK)

This program is intended to produce semi-professional graduates who possess strong engineering knowledge based on skills as assistant engineers. Apart from that, this program is a pathway for students with SPM qualification to further their studies to a higher level in their respective fields, especially the Electrical and Mechatronics Engineering Bachelor's Programme in UTeM.

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - DIPLOMA PROGRAMME

Programme Educational Objective (PEO) are specific goals describing the expected achievement of graduates in their career and professional life within 4 to 6 years of graduation. Below are the PEO for the Faculty of Electrical Engineering's Diploma Programme.

NO	PROGRAMME EDUCATIONAL OBJECTIVES (PEO)
The objectives of this program is to produce graduates that, after three to five years of completing studies,	
1.	Graduates will be Assistant Engineers who are knowledgeable and technically competent in related engineering/engineering technology field as demonstrated through carier progression.
2.	Graduates will be Assistance Engineers who are able to communicate profesionally with society at large and being ethical and responsible in performing leadership role in an organisation.
3.	Graduates will be Assistant Engineers who have vision in developing their self and career through lifelong learning or involve in techno-preneurs sector.

PROGRAMME OUTCOMES (PO) - DIPLOMA PROGRAMME

Programme Outcome (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the knowledge profile (DK1-DK7) that students acquire throughout the programme.

Below is the list of Programme Outcomes for Faculty of Electrical Engineering's Diploma Programme:

NO	PROGRAMME OUTCOMES (PO)
	Upon graduation, graduates should be able to :-
1.	Knowledge: Apply knowledge of applied mathematics, applied science, engineering fundamentals and an engineering specialisation as specified in DK1 to DK4 respectively to wide practical procedures and practices.
2.	Problem analysis: Identify and analyse well-defined engineering problems reaching substantiated conclusions using codified methods of analysis specific to their field of activity (DK1 to DK4)
3.	Design/development of solutions: Design solutions for welldefined technical problems and assist with the design of systems, components or processes to meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations (DK5).
4.	Investigation: Conduct investigations of well-defined problems; locate and search relevant codes and catalogues, conduct standard tests and measurements.
5.	Modern Tool Usage: Apply appropriate techniques, resources, and modern engineering and IT tools to well-defined engineering problems, with an awareness of the limitations (DK6).
6.	The Engineer and Society: Demonstrate knowledge of the societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to engineering technician practice and solutions to well-defined engineering problems (DK7).
7.	Environment and Sustainability: Understand and evaluate the sustainability and impact of engineering technician work in the solution of well-defined engineering problems in societal and environmental contexts (DK7).

NO	PROGRAMME OUTCOMES (PO)
	Upon graduation, graduates should be able to :-
8.	Ethics: Understand and commit to professional ethics and responsibilities and norms of technician practice
9.	Individual and Team Work: Function effectively as an individual, and as a member in diverse technical teams.
10.	Communications: Communicate effectively on well-defined engineering activities with the engineering community and with society at large, by being able to comprehend the work of others, document their own work, and give and receive clear instructions.
11.	Project Management and Finance: Demonstrate knowledge and understanding of engineering management principles and apply these to one's own work, as a member or leader in a technical team and to manage projects in multidisciplinary environments.
12.	Life Long Learning: Recognise the need for, and have the ability to engage in independent updating in the context of specialised technical knowledge.

COURSE IMPLEMENTATION - DEK

The number of credits required to be awarded a Diploma is **90** credits.

This course will take two (2) years and eight (8) months minimum which emphasis on the latest technology and up to date skills.

The composition of the credits is as follows:

Components		Credit Hours	Percentage
Compulsory University Course (W)		14	15.56%
Core Course (P)	Engineering	58	77.78%
	Science & Mathematics	12	
Elective (E)		6	6.66%
Total		90	100%

This course is based on practical and application oriented where the student will be involved in laboratory experiments, computer aided learning, working on practical assignments in electrical engineering workshop. UTeM is the first to conduct this type of Diploma.

CURRICULUM STRUCTURE - DEK

Students are required to keep record of their obtained grades for a given course as shown in Appendix A (Student Audit Form - DEK) for graduation purpose.

SUBJECT DETAILS FOR DIPLOMA PROGRAMME (DEK)

DEKA 1212 ALGEBRA

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of functions and graphs, polynomials, matrices, trigonometry and complex number.
2. Solve the mathematical problems that involve linear system, nonlinear equation, trigonometry and complex number by using an appropriate technique.
3. Apply the knowledge of algebra to deal with the engineering problems.

Synopsis

These subject serves as a fundamental mathematics course for engineering students. This subject discusses about the functions, graphs, matrices and systems of linear equations, polynomials, trigonometry and complex numbers. Through this subject, the students are exposed to various techniques in solving mathematics problems and its application in physical and engineering fields.

4. Abd. Wahid et al, 2009, Intermediate Mathematics, UTM.
5. Robert Blitzer et. al., 2007, Foundation Mathematics, Pearson Prentice Hall, Malaysia.

DEKA 1113 PHYSICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain basic concept in physics, covering aspect such as mechanics, electric and thermodynamics.
2. Use concepts systematically to solve problems in mechanics, fluid mechanics and electric.
3. Exhibit effective communication skills through oral presentation.

Synopsis

This course covers three major fields which are mechanics, fluid mechanics and electric. The topics covers in this course are: Forces, Acceleration and Newton's Second Law of Motion, Motion with a Changing Velocity, Circular Motion, Conservation of Energy, Linear Momentum, Fluids, Electric Forces and Fields, Electric Potential, Electric Current and Circuits, Magnetic Forces and Fields, Electromagnetic Induction. Experiments covered Mechanics and Electricity.

DEKC 1113 INSTRUMENTATION & MEASUREMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Understand of electrical measurement and instrumentation principles.
2. Analyze various methods/techniques involve in measurement and instrumentation of electrical engineering.
3. Demonstrate related experiment on measurement and instrumentation of electrical engineering.
4. Work effectively in group to complete the given tasks based on electrical engineering problem.

Synopsis

This course discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, AC meters as well as bridges. It also introduces the principle of data acquisition system used in instrumentation.

DEKE 1113

PRINCIPLE OF ELECTRICAL AND ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain and demonstrate the understanding of basic laws and operations of electronic devices in electrical and electronics circuit.
2. Analyze electrical and electronics circuits using appropriate rules and laws.
3. Measure electrical and electronics circuit parameters using appropriate tools.

Synopsis

This course will expose students to the fundamental knowledge in electrical and electronics engineering. It covers topics related to basic laws and introduction to electronics devices that usually used in electrical and electronic circuits. It starts with an introduction to basic element in electrical and electronics such as voltage, current and circuit elements. Then the student will be introduced to basic laws in circuit analysis such as Ohm's law, voltage, and current divider and Kirchhoff's law. After that, the electronics devices will be introduced to the student including an introduction to

semiconductors, diode, BJT, FET, and its analysis and applications.

DEKP 1111

BASIC ELECTRICAL SKILLS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the knowledge of basic electronic measurement, basic microcontroller programming, and electronic soldering processes.
2. Demonstrate appropriate instruments / tools handling skills required to solve engineering problems adequately.
3. Comply with rules, procedure and ethics skills through experiment project.
4. Cooperate effectively as a teamwork during laboratory activities.
5. Search, manage and synthesis related information in order to further apprehend their laboratory activities.

Synopsis

In this workshop, students will be exposed to three basic engineering work; Basic Electronic Measurement, Basic microcontroller programming, and Basic introduction to electronic components and soldering process. For the first session, student will be introduced to use several measurement equipment such as voltmeter, ammeter, multimeter, oscilloscope, etc for a given circuit, students need to measure the current and voltage at certain load. After that, student will be exposed to the basic microcontroller programming which is able to control the circuitry design in real time hardware assembling process (arduino circuitry) is carried out and will be assess with a mini project at the end of the session.

DEKP 1213

ELECTRICAL CIRCUIT I

Learning Outcome

Upon completion of this course, the student should be able to:

1. Introduction to basic law in electric circuit and apply method of analysis.
2. Apply and solve circuit theorems in analyzing electrical circuits.
3. Analyze circuits using appropriate simulation and hardware tools.

Synopsis

This course will cover the active and passive elements, resistive circuit (Kirchoff's and Ohm's Laws), linear circuits, Thevenin's and Norton's Theorems, Superposition Theorem, Nodal and Mesh analysis. Power in electrical circuit and maximum power transfers. Basic concepts to alternating current, sinusoidal and phasors theory - complex representation and phase and also introduction to PSpice for circuit's analysis.

4. R.C. Dorf and J.A. Svoboda, Introduction to Electric Circuits, 7th Ed, John Wiley & Sons, (2006).

DEKA 1222

CALCULUS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify limits and continuity of functions using computational methods of limits.
2. Solve derivatives of algebraic, trigonometric, logarithmic and exponential functions using differentiation techniques.
3. Solve integrals of algebraic, trigonometric, logarithmic and exponential functions using integration techniques.
4. Apply the knowledge of calculus to deal with the engineering problems.

Synopsis

This subject enhances two main parts in Calculus which consists of differential and integral which will be solved using analytical and numerical techniques. This subject serves to give students good understanding knowledge the basic concept of derivative and integration in solving application related to mathematics and engineering problems.

DEKE 1213

ANALOGUE ELECTRONICS

Learning Outcomes

Upon completion this course, the students should be able to:

1. Define the characteristics and operation of the BJT, Power Amplifier and Operational Amplifier.
2. Analyse the characteristics and operation of the Active Filter, Voltage Regulator, and Feedback and Oscillator.
3. Conduct and demonstrates practical experiments of BJT, Power Amplifier, Operational Amplifier, Active Filter, Voltage Regulator, and Feedback and Oscillator.
4. Work effectively in group to complete the given tasks based on electrical engineering problem.

Synopsis

This subject serves as an electronic fundamental course for engineering students. The topics that will be covered including the BJT, Power Amplifier, Operational Amplifier,

Active Filter, Voltage Regulator, and Feedback and Oscillator. Introduction to the use of P-Spice and Proteus simulation software for circuit designing as well as hardware experiments during laboratory will be implemented.

DEKP 1211 ELECTRICAL WORKSHOP

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate appropriate troubleshoot skills on relay control circuit and domestic wiring installation.
2. Ability to apply and use engineering drawing software tools for design electrical system.
3. Demonstrate the ability to awareness the safety, regulation and responsibility through practical competence on the relay control circuit and domestic wiring installation.
4. Demonstrate the ability to work in a team for the practical competence on circuitry design.

Synopsis

This workshop will expose student to relay control circuit, and domestic wiring installation. Concentration is given on the safety aspects and quality of works. Then the students also will be exposed the basic engineering software AutoCAD where to the 2D basic engineering drawing in which involve creating, editing, plotting and electrical services system.

DEKC 1313 MICROPROCESSOR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Able to describe microprocessor (Motorola 68000) architecture, its operation and the interfacing circuitry of microprocessor-based systems.
2. Develop and construct a microprocessor based system including writing instruction set in assembly language.
3. Demonstrate the ability to work in a team for the microprocessor based project.
4. Present in oral and written regarding output of microcontroller-based system project.
5. Demonstrate the basic skills of project management in managing the microprocessor based project.
6. Demonstrate the element of self learning in the microprocessor based project.

Synopsis

This course is about introduction to microprocessor architecture, instruction set, addressing mode, assembly language programming and interrupt. The course covers the concept of interfacing technique with memory device and peripheral, parallel and serial interfacing, interfacing with ADC/DAC, data sampling technique, system simulation and emulation based on actual microprocessor.

DEKA 1312

SAFETY AND HEALTH FOR ENGINEERS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate an understanding of knowledge with the types of hazard and workplace injury prevention, risk management, planning, organization, training and incident investigations.
2. Identify the Occupational Safety and Health knowledge, practices and responsibilities.
3. Collect and sort the relevant to the given talk of safety standards and regulations that must be maintained in compliance with regulatory requirements and within engineering limits.
4. Discuss current engineering safety and health issues and practices that impacting engineering professionals
5. Recognize the important of safety and health that need to be engage during professional work.

Synopsis

The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Through presentation by Invited speakers from the industry, DOSH and academia, students will be exposed to topics such as Department of Safety and Health (DOSH) & National Institute of Occupational Safety and Health and knowledge of contemporary safety and health issues in related to engineering fields. Presentation case study by the student with a given topic of safety and health will also be included.

DEKC 2123

AUTOMATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Solve problems based on provided information by applying the concept of Automation, Programmable Logic Controller
2. Design a solution for a well defined technical problems based on provided information by using PLC, Pneumatic, Hydraulic and other automation components
3. Conduct investigations of well-defined problems for the automation system based on design requirement, symbols and schematic diagram.
4. Demonstrate the understanding of the sustainability and impact of the automation system towards the environment and society.
5. Search for a suitable information and defined all related informations into well defined problems.

Synopsis

This course will introduce a fundamental of the automation in manufacturing sector, their components such as actuators, sensors as well linear and rotary transportation devices. It will also covers on programmable logic controller (PLC) as the main controller including its definition, main hard components, PLC programming languages, interfacing PLC with computers. And will also learn how to integrate PLC hardware and software and their components

5. IEC 61131 Standards for Programming Manuals.

DEKC 2113 CONTROL SYSTEM ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe fundamental knowledge of control system and the transient response of a linear time invariant system.
2. Develop a mathematical model for a linear time invariant system.
3. Analyze a linear time invariant system in time and frequency domain.
4. Search, manage and synthesize information to solve control problems in frequency domain using root locus and/or bode plot techniques.
5. Demonstrate experiments of control systems as well as to analyze and interpret data.

Synopsis

This subject will discuss about the concepts in control system; open and closed loop system; transfer function; signal flow graphs; feedback control system; modeling for electrical system, mechanical system; analysis in time and frequency domain responses and also stability in time and frequency domain.

DEKE 2123 POWER ELECTRONICS

Learning Outcomes

Upon completion this course, the students should be able to:

1. Explain the semiconductor power switches and analyze the performance of rectifiers, choppers and inverters in power converter application.
2. Demonstrate the ability of performing experimental works involving power electronics converters and devices.

3. Demonstrate the ability of communication skills through project presentation.

Synopsis

This course is about the basic principles of power electronics, semiconductor power switches single and three-phase inverter, the application of semiconductor devices in power electronics converters such as AC to DC, AC to AC, DC to DC and DC to AC converters, circuits as DC drives, AC drives and snubbers.

DEKA 2333 DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of the first and second order differential equations, Laplace transform and Fourier Series
2. Solve differential equation using an appropriate technique.
3. Apply the knowledge of differential equation to deal with the engineering problems.

Synopsis

This subject consists of 5 chapters: First order linear differential equations, Second order linear differential equations with constants coefficients, Laplace transform, Fourier series and Partial Differential Equations. The syllabuses are developed based on these three different stages which are exposing the learner's on the fundamental concept of differential equation, various techniques to solve different equation and lastly, apply the various solving techniques to the learner's engineering problem.

DEKP 2113 ELECTRICAL CIRCUIT II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and apply the principle of AC voltage and current generation, RMS, average value and RLC circuits for single phase and three phase systems.
2. Apply transient analysis on first order and second order electric circuits and conduct steady state analysis to solve AC circuit by using mesh, nodal and appropriate circuit theorems.
3. Demonstrate the ability to use appropriate engineering tool to analysing an AC circuits by simulation and hardware.
4. Able to search, manage and synthesize information.

Synopsis

This subject will cover the transient analysis for first order and second order electric circuits. Then, the students will be exposed to the principle of AC voltage and current generations, RMS, average value and RLC circuits analysis. Furthermore, the basic concept and principles to conduct Nodal and Mesh analysis, Thevenin's, Norton's and Superposition Theorems on single phase AC system will be covered in this course. Finally, this course also introduced the basic concept of three phase connections (star and delta) in power system network.

DEKA 2342 ENGINEERING MATHEMATICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Recognise the multivariable function and extend the principle ideas of calculus in such function.
2. Solve the mathematical problems that involve vector calculus.
3. Apply the knowledge of engineering mathematics to deal with engineering problems.

Synopsis

This subject consists of three chapters: Multivariable Functions, Double Integral and Vector-valued Functions. The syllabus is extended from subject Calculus which emphasizing the concepts of the functions with several variables, double integrals of functions in Cartesian and polar coordinates system and also vector-valued function.

DEKP 2213 POWER SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic concept of power system and their components.
2. Describe the basic principle and parameter calculation for transmission and distribution system.
3. Calculate the fault level and short circuit current in symmetrical and asymmetrical faults.
4. Demonstrate the ability to use appropriate engineering tools in electrical power system.

Synopsis

The aim of this course is to introduce the basis of electrical power engineering in relation to energy generation, transmission and distribution system. Then, basic principle and application of per unit method for generating the impedance diagram from simple electrical network will be introduced. The student also will be exposed to the fundamental and operating principles of power transformer and transmission line. Furthermore, basic principle of Gauss Seidel and Newton-Raphson methods for power flow analysis will be discussed. Finally, the course will cover the symmetrical fault level and short circuit current calculations for simple electrical network using per-unit method.

DEKP 2233

BUILDING MAINTENANCE AND MANAGEMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze any regulation and standard related to building maintenance and management problem.
2. Design the electrical and mechanical drawing component in building maintenance services.
3. Use appropriate engineering tools for the practical competence on building maintenance and management.
4. Demonstrate awareness of safety element in building management component in electrical and mechanical system.
5. Demonstrate awareness of environment and sustainability in building maintenance and management.
6. Search for proper techniques for building audit.

Synopsis

This subject covers the concept of building services and systems for mechanical, electrical, plumbing, building floor plans and building regulations, by-laws and code of practice.

This includes communication lines, escalators and lifts, fire detection and protection system, water drainage and plumbing. The students are also exposed to energy conservation and energy efficiency for environmental protection. Finally the students will be introduced to concept of the lightning protection, low voltage (LV) systems, distribution boards and switchgear, heating, ventilation and air conditioning (HVAC), security and alarm systems.

References

DEKC 2213

INDUSTRIAL ROBOTIC

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify, apply and analysis of basic knowledge of industrial robot system component including motion profile and mechanical aspect.
2. Apply specific robotic programming and simulations for industrial robots used in industrial automation systems.
3. Demonstrate ability to use robotic technologies in a safety manners.
4. Demonstrate ability to use robotic technologies in a sustainable operation.

Synopsis

Introduction to robotics, classification of robots, basic components of robot systems, basic concepts of kinematics and dynamics, mechanical structure of robot systems, robot drives and motion control system using stepper motor, servo

motor, servo amplifier and pneumatics, sensory devices such as position, force and torque, basic robot programming and industrial robot applications. Experiments will include robot programming in an industrial application setting.

DEKP 2223

RENEWABLE ENERGY AND APPLICATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify and analyze various types of renewable energy, characteristics, performance and their application.
2. Design an appropriate renewable energy system to suit with specific need, criteria and conditions.
3. Demonstrate awareness of the design and installation procedure of renewable energy system with consideration of safety, legal and societal issues.
4. Evaluate the impact of the renewable energy technology in terms of electricity supply sustainability.

Synopsis

The subject intends to expose to the students the most recent development on the sustainable electrical resources. This subject also introduces the students various form of sustainable energy resources and their connection to the electrical network. The students also exposed to different types of photovoltaic materials, characteristics and the design procedure to create a photovoltaic system. In addition, there will be a brief intro to the other sustainable energy applications such as wind turbine, hydro, biomas, etc.

DEKU 3118

INDUSTRIAL TRAINING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.
2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level. Work affectively as an individual, team members and as a leader as well.
4. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis

All Diploma students are required to undergo industrial training as part of their curriculum to complete their two and half (2 1/2) years course after semester 4 of studies for a 16-weeks period of training at respective industrial companies. It is compulsory for all students to undergo the Industrial Training Programme. In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors. A PO survey is also embedded inside the assessment form by the industry supervisors. There will also be a survey by the students prior to completion of their training. After completing the industrial training, students have to submit a formal report following the faculty format. Evaluation will be based on faculty supervisor report, industrial supervisor report and student logbook toward grading whether pass or fail.

SERVICE COURSES (FKM, FPTT, PBPI, FTMK, & CO-CURRICULUM UNIT)

DMCG 1323

INTRODUCTION TO MECHANICAL SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Define the general terms in basic mechanical system engineering.
2. Explain the general principles of static and mechanics.
3. Analyze the mechanical properties of materials.
4. Describe the basic concepts of thermodynamics.
5. Conduct and demonstrate the basic practical works of mechanical system.

Synopsis

Introduction to basic concepts in static and mechanics as a study of physical sciences, system of units, scalars and vectors, free body diagram, various types of structures, stress, strain, principles of dynamics based on kinetic and kinematics and basic concepts of thermodynamics.

DLHW 1012

FOUNDATION ENGLISH

Learning Outcomes

1. Interpret information from various types of oral texts.
2. Express ideas and thoughts orally in group discussions.
3. Distinguish different types of reading texts of varying length and complexity.

4. Produce an article based on non-linear texts in pairs.
5. Apply appropriate grammar elements in quizzes.

Synopsis

This course is designed to help students to improve their proficiency in the English language and to communicate effectively in both spoken and written forms. Five main aspects: listening, speaking, reading, writing and grammar are taught in an integrated approach to build confidence among the learners to become efficient speakers of English in their tertiary education.

DLHW 2422

ENGLISH FOR EFFECTIVE COMMUNICATION

Learning Outcomes

1. Demonstrate interpersonal skills through speeches and role-play based on a situational context.
2. Explain product descriptions and manual instructions in group.
3. Apply appropriate course-verb agreement, tenses, active and passive voices as well as transitional markers in written examination

Synopsis

This course is designed to provide students with the necessary communication skills to communicate effectively. The skills covered are speaking, reading and writing. The elements of grammar are taught to complement the topics covered in this course. The documents covered are product descriptions and manual instructions. Students demonstrate interpersonal skills through speeches and role-play. The elements of problem-based learning (PBL) are especially exercised during the oral presentation of the product and manual descriptions as well as role-play.

DLHW 3432 ENGLISH FOR MARKETABILITY

Learning Outcomes

1. Produce a reflective writing, resume, job application letter/ online job application letter and short report.
2. Response appropriately to questions during mock interview session.
3. Analyse possible solutions based on the given problem in a group discussion.
4. Use appropriate types of communication using a variety of sentences based on the workplace contexts.

Synopsis

This course aims to introduce and expose students to the basic tenets of communication specifically the oral and written communication required at the workplace. Students will be provided with the opportunity to produce a reflective writing, resume, job-application letter, e-message and report. They will also be able to participate in an interview, and to discuss and explain information in group discussions. Students will be exposed to situations where they learn to function as individuals and team members by communicating in spoken and written forms using appropriate language in a variety of workplace contexts.

DITG 1113 COMPUTER PROGRAMMING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental principle of problem solving, programming techniques and programming structures in program development
2. Explain problem solutions based on the principles of problem solving, programming technique and programming structures
3. Produce program codes by applying suitable programming structure and techniques

Synopsis

This course covers the introductory topics in programming using computer language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

DTMW 1012 FUNDAMENTAL OF ENTERPRENEURIAL ACCULTURATION

Learning Outcomes

Di akhir kursus ini pelajar akan dapat:

1. Menerap budaya keusahawanan berdasarkan teori keusahawanan, revolusi usahawan, sejarah pembangunan usahawan dan perkembangan keusahawanan di Malaysia.
2. Memperakui dan mengaplikasikan kemahiran keusahawanan seperti kreativiti, inovasi, pro-aktif, mengambil risiko, mengenalpasti peluang, pemasaran dan rangkaian untuk memasuki/menembusi pasaran.
3. Melaksanakan pengajaran seminar keusahawanan dan kerja lapangan perniagaan di samping membuat pembentangan projek perniagaan serta berkongsi pengalaman berkaitan pelaksanaan projek perniagaan kumpulan masing-masing.

Synopsis

Kursus ini akan membekalkan pelajar dengan motivasi dan kemahiran utama keusahawanan. Di samping itu, pelajar juga akan mendapat kemahiran tentang prinsip-prinsip dan amalan yang diperlukan untuk memulakan, mengembangkan dan memperkukuhkan sesebuah perniagaan. Aktiviti pengajaran, pembelajaran dan aplikasi yang menerapkan teori dan amalan akan membantu pelajar menguasai kompetensi yang perlu sebelum menceburkan diri dalam bidang perniagaan. Kursus ini juga membantu pelajar membentuk jaringan/rangkaian perniagaan melalui perbincangan perniagaan, simulasi dan seminar. Pelajar akan didedahkan dengan isu-isu yang berkaitan dengan pemasaran, pengurusan strategi dan risiko. Di samping itu, pelajar akan dibekalkan dengan kemahiran yang perlu untuk menyediakan penyata aliran tunai dan asas dalam membangunkan/menyediakan perancangan perniagaan.

DKXX XXX1 CO-CURRICULUM I &II

Please refer to the Pusat Bahasa & Pembangunan Insan (PBPI) handbook for further information on the offered courses.

BACHELOR PROGRAMME

PROGRAMME EDUCATIONAL OBJECTIVES (PEO) - BACHELOR PROGRAMME

Programme Educational Objective (PEO) are specific goals describing the expected achievement of graduates in their career and professional life after 5 years of graduation. Three main concepts for PEO for the Faculty of Electrical Engineering's Bachelor Programme consist of Apply engineering knowledge and contribution to respected field, the achievement in technical career as well as lifelong learning.

BACHELOR OF ELECTRICAL ENGINEERING (BEKG)

The objectives of this programme are to produce creative and innovative Professional who:

1. Practice electrical engineering knowledge in broad applications.
2. Attain a successful career, possess excellent leadership quality, able to work independently and practice ethical conduct.
3. Engage with life-long learning and adapt to constantly evolving technology and entrepreneurial skills in decision making.

BACHELOR OF MECHATRONICS ENGINEERING (BEKM)

The objectives of this program is to produce, after 5 years of graduation,

1. Graduate who practice mechatronics engineering knowledge in broad applications related to manufacturing, operation, project development, services, maintenance, management and research development.
2. Graduate who are successful in career, possess excellent leadership quality, able to work independently and practice professional ethical conduct.
3. Graduate who engage with lifelong learning and adapt to constantly evolving technology and entrepreneurial skill.

PROGRAMME OUTCOMES (PO) - BACHELOR PROGRAMME

Programme Outcome (PO) are statements describing what students are expected to know and be able to perform or attain by the time of graduation. These are related to the Knowledge (K), Skills (S), and Attitude (A) that students acquire throughout the programme.

Below is the list of Programme Outcomes for Faculty of Electrical Engineering's Bachelor Programme:

NO	PROGRAMME OUTCOMES (PO)
1.	Ability to apply knowledge of mathematics, science, engineering fundamentals and an electrical/mechatronics engineering to the solution of complex electrical and related engineering problem. (K,A)
2.	Ability to identify, formulate, research literature and analyse complex electrical/mechatronics engineering problems reaching substantiated conclusion. (K,S,A)
3.	Ability to design solutions for complex electrical/mechatronics engineering problems and design systems or components or processes that meet requirement with appropriate consideration for public health and safety, cultural, societal, and environmental. (K,S,A)
4.	Ability to conduct investigation into complex electrical/mechatronics engineering problems using research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions. (K,S,A)
5.	Ability to create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering activities, with an understanding of the limitations. (K,S)
6.	Ability to apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice. (K,A)

NO	PROGRAMME OUTCOMES (PO)
7.	Ability to demonstrate the understanding for impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge and need for sustainable development. (K,A)
8.	Ability to apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice. (K,A)
9.	Communicate effectively on complex engineering activities with the engineering community and with society at large through presentation or technical writing. (S,A)
10.	Ability to function effectively either as a member or a leader in a team and in multi- disciplinary environment. (S,A)
11.	Ability to recognise the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. (K,A)
12.	Ability to demonstrate knowledge and understanding of engineering economics, management principles and entrepreneurship skills as applied in the electrical engineering profession. (K,A)

**BACHELOR OF ELECTRICAL
ENGINEERING (BEKG)**

BACHELOR OF ELECTRICAL ENGINEERING (BEKG)

The Bachelor of Electrical Engineering (BEKG) consists of areas related to the electrical engineering including industrial power and high voltage, renewable energy, control and automation systems, electrical machine, and power electronics and drives.

PROGRAMME IMPLEMENTATION - BEKG

This programme would take four (4) years minimum and consist of at least 135 credit hours. The programme will emphasis on Electrical Engineering with the composition of the credits are as follows:

Components		Credit Hours	Percentage
University Requirements (W)		14	10.37%
Core (P)	Common	38	28.15%
	Program	65	48.15%
	Industrial Practical	5	3.70%
Electives (E)	University	4	2.96%
	Program	9	6.67%
Total		135	100%

This programme emphasizes on theoretical and tutorials, computer-aided learning, and problem based learning (PBL). It also encourages active and cooperative learning activities other than carrying out assignments, job workshops, industrial training and final year project.

CURRICULUM STRUCTURE - BEKG

Students are required to keep record of their obtained grades for a given course as shown in Appendix B (Student Audit Form - BEKG) for graduation purpose.

SUBJECT DETAILS FOR BACHELOR PROGRAMME (BEKG)

BEKB 1131

ELECTRICAL ENGINEERING WORKSHOP I

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct three phase motor starter control circuit.
2. Apply the basic concept for electrical simulation using Pspice and PROTEUS simulation tools.
3. Apply the basic concept for electrical schematic diagram using AUTOCAD tools
4. Apply the basic microcontroller programming language for dynamic mechanism application.
5. Demonstrate team work and present the results in oral and technical report writing.

Synopsis

This course will let students to practice with Pspice, PROTEUS, Arduino and AUTOCAD simulation tools to solve simple engineering problem. Students also will be introduced with three phase motor starter which is cover on DOL, Forward-Reverse and STAR/DELTA connection.

BEKB 1231

ELECTRICAL ENGINEERING WORKSHOP II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct three phase motor starter control circuit.
2. Apply the basic concept for electrical schematic diagram using AUTOCAD tools.
3. Apply the basic microcontroller programming language for dynamic mechanism application.
4. Demonstrate team work and present the results through oral and technical writing.

Synopsis

This course will let students to practice with Arduino and AUTOCAD simulation tools to solve simple engineering problem. Students also will be introduced with three phase motor starter which is cover on DOL, Forward-Reverse and STAR/DELTA connection.

BEKB 2331

ELECTRICAL ENGINEERING LABORATORY I

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct series and parallel RLC circuits using electrical components and PSPICE simulation correctly.

2. Measure the electrical characteristics of single-phase and three-phase RLC circuit using appropriate measurement equipments precisely.
3. Identify and describe basic characteristics and operation of digital components such basic gates and it's combinational, adder, and flip-flops clearly.
4. Identify and describe basic circuit and operation of analogue application circuit such as active filter, amplifier, voltage regulator, and oscillator clearly.
5. Exhibit communication skills from lab report writing.

Synopsis

Students will conduct experiments of single-phase and three-phase circuits with RLC load combinations to measure the electrical quantities such as voltage, current and power. The measurement values will be used to calculate the reactive power, apparent power and power factor. Students are also expected to analyze the performance and characteristics of the system during transient and resonance conditions by using PSPICE simulation. The laboratory experiments also consist of practical and simulation activities which are conducted to enhance student skills and theoretical knowledge in analogue electronics and digital electronics system topics. The experiments include small signal amplifier, power amplifier, oscillator, basic gates, combinational logic circuit, binary adder, and flip-flop.

BEKB 2431

ELECTRICAL ENGINEERING LABORATORY II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Simulate Discrete-Time & Continuous-Time Signal as well as Fourier series using MATLAB / SIMULINK software.
2. Simulate power system (generation / transmission / distribution) using PSCAD
3. Construct transmission line components as well as voltage, current, and power measurements equipment properly and safety in laboratory environment
4. Exhibit the problem solving and critical thinking during any issues
5. Demonstrate soft skill such as spirit of teamwork
6. Write and present technical report systematically

Synopsis

This laboratory provides students with practical activities of signal and system theory as well as power system engineering theory. The laboratory session will cover the simulation of introduction to MATLAB & SIMULINK, Discrete-Time & Continuous-Time Signal and Fourier series using MATLAB software. It also cover the simulation of introduction to power system using PSCAD and also an experiment that provides practical approach of fundamental of power system especially in generation and transmission equipments.

BEKB 3551

ELECTRICAL ENGINEERING LABORATORY III

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct of rectifier, chopper, inverter and other power electronic devices accurately
2. Describe the performance of synchronous and induction machine properly
3. Analyze the performance of the open-loop and closed-loop system according to specifications.
4. Exhibit soft skills such as communication skill.

Synopsis

This course is intended to provide the student knowledge about the fundamental of power electronics, electrical machines and control systems through experimental works.

The experiments are designed to expose student on the practical aspects of the above mentioned fields.

BEKB 3673

INTEGRATED DESIGN PROJECT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Design solutions by synthesizing electrical engineering knowledge that will solve complex electrical engineering problem in accordance to relevant standards and with appropriate consideration for public health and safety, cultural, societal, environmental and sustainability factors.
2. Utilize modern engineering and IT tools in facilitating solution to complex electrical engineering problems with an understanding of the limitations.
3. Evaluate the impact of the designed product, components or processes, in terms of safety, environmental and sustainability factors.
4. Demonstrate effective teamwork skills in completing the electrically integrated design project.
5. Apply project management and financial knowledge effectively in completing the electrically integrated design project.

Synopsis

Electrical engineering project is integrated design project where student have to design project where students have to design an electrical and electronic engineering project including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of

development projects given to students, working in groups. Apart from basic electrical and electronic design, students are also required to integrate their knowledge of other engineering such as (but not limited to) circuit design and analysis, including component selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various of electrical engineering knowledge.

BEKC 2433

SIGNAL AND SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the basic knowledge of signals and systems for continuous-time and discrete-time signals.
2. Analyze the linear time-invariant (LTI) systems in time-domain and frequency-domain.
3. Analyze the LTI systems using Z-Transform method.

Synopsis

This course will discuss about the introduction to signals and systems; classification of signals and systems; linear time-invariant systems and convolutions; Fourier series and Fourier transform; Fourier analysis for continuous-time and discrete-time signals; and Z-transforms method.

BEKC 2453 COMMUNICATION SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic principles of analogue & digital communication, data and computer network
2. Analyse the analogue and digital communication techniques that are typically used in communication systems
3. Explain the concept of computer system network

Synopsis

Topics covered are: Introduction to Telecommunications, Transmission Modes, Power Measurements, Electromagnetic Frequency Spectrum, Bandwidth and Information Capacity, Amplitude Modulation Transmission & Reception, Single-Sidebands Communications Systems, Angle Modulation Transmission & Reception, FM Stereo, Noise in Telecommunication Systems, Digital Communication, Digital Transmission, PCM, Digital Modulation / Demodulation, ASK, FSK, PSK, Data Communication & Computer Network. Frequency Division Multiplexing, Time Division Multiplexing, Space Division Multiplexing.

BEKC 3543 MICROPROCESSOR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and explain microprocessor (Motorola 68000) architecture and its operation. Able to illustrate the interfacing circuitry of microprocessor-based systems and its supporting components.
2. Write and apply the 68k Microprocessor instruction set operation in assembly language.
3. Describe and distinguish the concept of the Motorola 68000 microprocessor system with memory and peripheral device interface.
4. Develop and construct a microprocessor-based system and solve the problem related and prepare the technical report.

Synopsis

This course is about hardware and microprocessor handling, type of microprocessor systems, system handler and timing diagrams. The course covers the concept of MC68000 microprocessor software architecture, programming, assembly language and basic instruction, data transferring instruction, program control and subroutine, arithmetic and logic operations. It touches most on programming techniques, designing a microcomputer system, interfaces with memory and I/O devices. Students will experience PBL approach in this course where a PO-PBL will be introduced to the student.

BEKC 3523 CONTROL SYSTEMS ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic features and configuration of control systems and derive the mathematical model of physical system in frequency and time domains

- Analyse control system performance and stability of linear control system in time and frequency domains
- Employ root locus method and its role in control system design
- Analyse the asymptotic approximation Bode plots performances for first order and second order systems

Synopsis

This subject introduces the students to the fundamental ideas and definition of control systems such as block diagrams, plants or processes, open-loop and closed-loop control systems, transfer functions and transient and steady state responses. Students will be taught on how to obtain mathematical models for actual physical systems such as electrical, mechanical, electromechanical and simple fluid flow systems in transfer function and state space equation. Methods of system representation such as block diagram representation and signal flow graphs will be examined. The students will also be exposed to techniques of analysing control systems such as time domain analysis and stability. Besides, the student will be taught on the Root locus method and system performance analyse using Bode diagrams. Finally, an introduction to the design and analysis of control systems using MATLAB will also be given.

BEKC 3663

INSTRUMENTATION AND CONTROL

Learning Outcomes

Upon completion of this course, the student should be able to:

- Apply and analyze the appropriate instrumentation elements for a data acquisition system.
- Design compensators and controllers for control systems in time and frequency domain.
- Design a controller and observer for a state variable feedback system.

Synopsis

This course divides the contents into two parts; Control System and Instrumentation. Control system part introduces students to the controller design of Linear Time Invariant

(LTI) Systems by using Root Locus, Ziegler Nichols and state variable feedback systems. In state variable feedback systems, students will study the controllability and observability of LTI systems in state-spaceform, and design a state feedback controller with full-state feedback observer by using pole placement approach. Instrumentations part exposes students to the concepts of data acquisition system (such as sensors & transducers, signal conditioning & processing, A/D and D/A conversion, interfacing standards and data presentation).

BEKC 4773

INTELLIGENCE CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

- Utilize the simulation tools for AI applications such as Simulink and MATLAB for appropriate industrial case studies.
- Design basic fuzzy logic or neural network systems according to the engineering problem.
- Demonstrate and analyze the performance of fuzzy logic and/or neural network using Simulink/MATLAB or other specified tools.

Synopsis

Artificial Intelligence (AI) is a field of study concerns on allowing machines to imitate human's thinking or behaviour. By applying AI techniques, machines would be able to solve complex engineering problems such as predicting numbers of defect products in factory, optimizing a water tank system, classifying patients based on symptoms of a disease and etc. In this course students will be focusing on two popular sub topics in Artificial Intelligence area which is Neural Network

and Fuzzy Logic. Students will be exposed towards the concept of Neural Network and/or Fuzzy Logic and its implementation methods in controlling engineering system using appropriate tools such as SIMULINK/MATLAB.

BEKC 4683

DIGITAL CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Transform continuous-time signals into discrete-time signals and to represent LTI digital control systems in z-domain.
2. Analyze the stability and performance of digital control systems in time, frequency, and z domains.
3. Analyze the digital control systems represented in state space model.
4. Design a digital PID controller and digital lead-lag compensators using root locus and frequency response methods, and state feedback using a pole-placement method.

Synopsis

This subject consists of discussions about an introduction to digital control systems, the relationship between continuous-time and discrete –time control systems, digital system coding, sampling process, quantization and z-transform, and digital control system representations. The notions of controllability, observability, and stability of digital control systems and analyses in time, frequency, and z domains are also included in this subject. The design of digital PID

controllers, lead-lag compensators, and state feedback and observer gain via a pole placement are covered in this subject. The analyses and design of digital control systems are performed using MATLAB and Simulink. Students are encouraged to gain scientific knowledge of contemporary issues related this subject.

BEKE 2333

ANALOGUE ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the operation of BJT/FET amplifier, power amplifier, oscillator/active filter and voltage regulator
2. Analyze the BJT/FET amplifier, power amplifier, oscillator/active filter and voltage regulator
3. Design the analogue circuit system for signal amplification
4. Work effectively as individual or in group to complete the given tasks.

Synopsis

This course is about the basic principle of analog electronic circuits mostly performing the concepts of amplification. The course subjects contain the concepts of amplifier, BJT and FET are the devices usually used in amplifiers, small signal amplifier, power amplifiers (class A and class AB), oscillator, active filters and voltage regulators.

BEKE 3533 ELECTRICAL MACHINES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Understanding on basic principle of electromechanical energy conversion and operation of electrical machines.
2. Analyze dynamic parameters and performances of electrical machines in terms of torque density, power efficiency and speed.
3. Design an electrical machines based on given requirements and constraints.

Synopsis

Introduction to selected type of both DC and AC electrical machines which cover physical construction, equivalent electrical circuit diagrams and working principles. The machine performances like torque, speed and efficiency are investigated. The starting and control techniques are also investigated for a better machine selection of appropriate application.

BEKE 3543 POWER ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate the principle, theory and concept of power electronic devices, rectifiers, dc to dc converters and inverters.
2. Develop and design power rectifiers, dc to dc converters and inverters by incorporating the power electronic devices and components for various engineering applications.

Synopsis

This course will discuss the characteristics of power switching devices so that the suitable devices and components can be selected in designing the power electronic converters. Various topologies of power electronic converters such as rectifiers, dc-dc choppers (non-isolated and isolated), dc-ac inverter (single and three phase) and their principle operation will be discussed. The performance parameters of the power converters, i.e. average and rms values, power, efficiency, total harmonic distortion (THD) and etc. will be analyzed through the mathematical calculation and simulation using PSpice and Matlab. In addition, several switching techniques including pulse width modulation (PWM) and their effect on the converter performance will also be covered.

BEKE 3673 INDUSTRIAL POWER ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Understand and analyze the application of power electronics in renewable energy, power system, industrial appliances and transportation.
2. Explain the operation, function and interaction between the components and the sub-systems used in power electronic applications.
3. Model, analyze and design the power electronic application system.

Synopsis

This course will discuss the principles of power generation, power application, and power quality improvement by means of power electronic devices. The basic operation and design of power supply and gate driver will be reviewed at glance. Subsequently, students will be given fundamental knowledge

on how to design common power electronic systems used in industrial applications. The basic operation and designed of switched mode power supply (SMPS), power electronics in solar applications, high voltage direct current (HVDC), flexible AC Transmission Systems (FACTS), electric/hybrid vehicles and active filter will be exposed to the students.

BEKE 4753

ELECTRICAL DRIVES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyse the characteristics and dynamic modeling of electrical machine and drives
2. Analyze the performance parameters of the electrical drives.

3. Design control strategy to drive the machine for optimum performance.
4. Operate as a team member or leader in a team project.
5. Engage in an independent and life long learning.

Synopsis

This course will discuss the electric drives, switch-mode converters, quadrants operation, current-controlled converters, modeling and transfer function of DC motor, converters of DC drive, closed-loop control of DC drives. It also covers the basic operations and dynamic modeling of Induction Motor, including scalar control, vector control and implementation of motor drive using microprocessor

BEKE 4763

MODERN ELECTRICAL DRIVES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain power electronics conversion in AC drives.
2. Analyze the dynamic motor of 3 phase AC machine.
3. Design the controller and evaluate the performance of AC drive systems.

Synopsis

This course will discuss the electric drives components, machine reference frame principle, vector transformation, direct vector control of synchronous motor and induction motor drives, dynamic modeling of AC motors, three-phase PWM Voltage Source Inverter fed AC motor drives and direct torque induction motor drives. Closed-loop speed control,

current control and voltage control strategies including hysteresis current control, ramp-comparison and space-vector modulation. Students will experience POPBL approach in this course.

BEKE 4873

ELECTRIC MACHINE DESIGN

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Demonstrate fundamental understanding of the interaction of the electromagnetic and mechanical engineering disciplines related to electrical machine design.
2. Identify of the differences in construction, performance and operation between the main topologies of electrical machines.
3. Select and employ techniques to design an electrical machine and select the appropriate materials for the application at hand.

Synopsis

This module is a continuation of the material covered in electrical machines. The module will cover the machine sizing considering power electronic and mechanical issues, magnetic materials including soft and hard materials and winding design, operating principle and basic design principles of different machine types and topologies including surface and buried permanent magnet radial machines, axial flux and reluctance machines.

BEKG 1123

PRINCIPLES OF ELECTRIC AND ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic electrical and electronics principles, circuit schematics and components.
2. Solve basic electric DC circuits using electrical and electronics principles
3. Explain the operating principles of semiconductor devices for Diode, BJT, FET and Op Amp.
4. Analyze the operating principles of semiconductor devices and electrical and electronics to solve the Diode, BJT, FET and Op-Amp circuits.

Synopsis

This course will discuss about the basic principles of electrical and electronics; such as fundamental knowledge on electric element, principles of electricity, units associated with basic electrical quantities, symbol and components. Then the study on how to apply circuit theory to the solution of simple circuits and networks by the application of Ohm's law and Kirchhoff's laws, and the concepts of potential and current dividers in solving DC series and parallel circuit is explained. Then, the behaviour of semiconductors and the way in which they are employed in diodes will be discussed. The semiconductor theory and devices covers the atomic structures, energy band, P-type and N-type and how these materials are employed to form devices such as diode and BJTs. Then the application and calculation of diode, DC biasing of Bipolar Junction Transistor(BJT), DC biasing of Field Effect Transistor (FET) and Operational-Amplifier (Op-Amp) circuits is explained.

BEKG 1233

PRINCIPLES OF INSTRUMENTATION AND MEASUREMENT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the principle, various terms and standards in measurement.
2. Explain the principle of measurement devices.
3. Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.
4. Explain the operation, function and applications of the transducers/sensors.

Synopsis

This course discusses about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as accelerator meter. It also introduces oscilloscope and sensors for instrumentation application.

BEKG 2433

ELECTRICAL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the major components of an electrical power system (generation, transmission, and distribution system)
2. Calculate the AC voltage and current characteristic in AC circuits.
3. Analyze the single and three phase circuits by emphasizing on complex power and power factor correction
4. Analyze the magnetic, single phase transformer and three phase transformer equivalent circuits.

Synopsis

This subject introduces students to topics such as alternating current circuit analysis, phasor representation, RMS value, average power, reactive power, active power, apparent power, power factor and power factor correction for single phase and balance three phase system. In addition, magnetic circuit, construction and operation of transformer will be discussed in this subject.

BEKG 2443

ENGINEERING MATHEMATICS II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of multivariable functions, multiple integrals and vector calculus
2. Solve the mathematical problems that involve function of several variable, multiple integrals and vector calculus.
4. Apply the knowledge of advanced engineering mathematics to deal with the engineering problems.

Synopsis

This course consists of three chapters: Function of Several Variables: Functions of Two or More Variables, Limit and

Continuity, Partial Derivatives, Total Differential, Chain Rule, Implicit Differentiation and Local Extrema. Multiple Integrals: Double Integral, Double Integral Over Non-Rectangular Regions, Double Integral in Polar Coordinates, Triple Integral, Triple Integral in Cylindrical and Spherical Coordinates and Moment and Centre of Gravity. Vector Calculus: Vector fields, Line integral, Green's theorem, Curl and Divergence, Parametric surfaces and their Areas, Surface integrals, Stoke's theorem and Divergence theorem.

BEKM 4863 INDUSTRIAL ROBOTICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the solution of complex kinematics and dynamics problem
2. Design a robotic manipulator workcell for manufacturing purposes.
3. Explain the working principles of robot manipulator drive, flexible manufacturing system and quality control in industrial robotic network

Synopsis

This course is an introduction to the basic principle of robotic technology in industry. Robotic systems fundamental which includes forward and reverse kinematics of the basic robotic are introduced. Fundamental mathematics, scientific and engineering knowledge will be applied in this course to the solution of complex robotic problems. In developing the solution of integration of robotic components, the robotic actuation and drive systems are introduced; i.e. pneumatic and hydraulic systems, mechanical actuation systems, and electrical actuation systems. Student will be exposed to

industrial field topics such as production system and integration of industrial robotic in flexible manufacturing system. The quality production will be analyzed using six sigma and DMAIC procedure.

BEKP 2453 ELECTROMAGNETIC THEORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply vector analysis in order to solve problems regarding electromagnetic phenomena.
2. Apply vector analysis in order to solve problems regarding electromagnetic phenomena
3. Explain the principle of magnetostatics and calculate basic & intermediate magneto static problems.
4. Identify and utilize the Maxwell's equation in static and dynamic electromagnetic fields.

Synopsis

This course begins by teaching about vector calculus, an essential mathematical tool for gaining a quantitative understanding of the electromagnetic phenomena. It is then followed by the study of electrostatic fields; covering Coulomb's Law, Gauss's Law, conductors, dielectrics, and electric boundary conditions. Next, magnetostatic fields are covered; its sub-topics include Biot-Savart's Law, Ampere's Law, magnetic forces and torque, and magnetic boundary conditions. After that, the course will examine the situations in which electric and magnetic fields are dynamic (i.e. varies with time) using Maxwell's equations.

BEKP 3653

POWER SYSTEM AND HIGH VOLTAGE

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze the problems on power system regarding to generation and transmission line models.
2. Apply per unit system to produce quantities and elements for single-line diagram.
3. Identify and analyze the conduction and breakdown theory in gas, solid and liquid dielectrics.
4. Describe and explain the various topics pertaining to high voltage application and technology.

Synopsis

This course is divided into two parts, power systems and high voltage engineering. The first part gives an introduction on power system generation, transmission line model and per unit system. The second part on the other hand, focuses on conduction and breakdown of high voltage insulation systems as well as high voltage application and technology.

BEKC 3673

INDUSTRIAL CONTROL AND AUTOMATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles and fundamentals of industrial control systems and automations system.
2. Analyze complex structure of control processes based on pneumatic and hydraulic applications, as well as by using feedback and feedforward control systems.
3. Design automated PLC based systems with consideration for specific needs.

Synopsis

This subject will cover sensors, instrumentation and control systems commonly used in the industry. The instrumentation part includes topics such as sensors, signal conditioning and conversion, transducers & actuators, and data acquisition. The industrial control portion covers the evaluation and types of control systems, centralized system, distributed control systems (DCS), fieldbuses, PID controllers and their operations. It will include other common control systems such as feedforward, cascade, ratio, time-delay compensation, sequence control. Besides, it will cover appropriate controllers for process control industries, too.

BEKP 3683

DISTRIBUTION SYSTEM DESIGN

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze and breaking down the information of design parameters into component parts.
2. Create the design of low voltage system by using standard design procedures.
3. Apply the concept and technical specification of low voltage protection system
4. Apply the Acts, Regulations and Standard related to electrical installation and its safety.

Synopsis

This course presents the principles and design of electrical distribution system. It covers various issues of distribution system which includes regulations and standards related to electrical installation. Characteristics and specifications for circuit breakers, cable size selection, and method of earthing and earthing arrangement are described in detail. The students are also exposed to the use of standard design procedures and the type of testing and troubleshooting required for low voltage systems. The students will also be exposed on the concepts of protection and its devices in low voltage system.

BEKP 4773

POWER SYSTEMS ANALYSIS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Develop the Per-Unit system from one line diagram and analyzed the power flow analysis using Gauss Seidel and Newton Raphson method.
2. Investigate the balanced and unbalanced faults in Power System and the stability of synchronous machine

3. Work effectively as individual or in group to complete the given task.
4. Engage in independent and life long learning

Synopsis

The Power System Analysis covers transient / dynamic nature of power systems such as fault analysis, load flow and stability analysis. The analysis on balanced and unbalanced faults in power systems are discussed. Solutions for unbalanced faults are approached using fundamentals of symmetrical components. The course also covers the fundamental concept of the behavior of synchronous machines after a disturbance, i.e, steady-state and transient

BEKP 4843

RENEWABLE ENERGY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Interpret the government policy in relation to renewable energy development both technically and economically.
2. Analyse the selected forms of distributed generators and their associated connection impacts to the electrical grid
3. Design the grid-connected solar photovoltaic system and evaluate the system performance accordingly

Synopsis

The course intends to expose the students the most recent renewable energy development both technically and economically. This includes context, drivers and the up-to-date government policy. In addition, this course also introduces the students various form of renewable energy resources and their associated impact to the electricity systems. The students will also be exposed to different types of photovoltaic technology. Finally, this course includes the detail design of grid-connected PV systems and the performance evaluation.

BEKP 4853

ENERGY UTILIZATION AND CONSERVATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify and analyze energy consumption for different type of electricity tariff, demand side tariff initiative, penalty in electricity bill and correction strategy for different sector
2. Design and establish a Sustainable Energy Management System (SEMS) strategy for an organization.
3. Conduct and implement procedural energy auditing and interpret data through measurement & verification practices with economic aspect for energy management project.
4. Apply energy policies, regulation, act, energy efficient, green and renewable technologies toward energy utilization and conservation.

Synopsis

This course introduces energy utilization and conservation through the understanding of its energy policies, regulation and act such as electricity supply act 1990 (act 447) and electricity regulation 1994, energy commission act 2001 (act 610) and efficient management of electrical energy regulation (emeer) 2008 at distribution level. The syllabus covers the important of energy efficient equipment, green and renewable technologies towards utilization and conservation. Furthermore, analysis of different electricity tariff categories and energy auditing procedure will be conducted and implemented. Finally, this course will also cover the evaluation of the economic aspect in energy management project through measurement and verification practices.

BEKP 4873

POWER SYSTEM PROTECTION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the basic principles of power system protection.
2. Analyze the use of Current Transformer (CT), Voltage Transformer (VT), fuse and circuit breaker for protection through technical justification.
3. Design the coordination for protection system scheme.
4. Design appropriate protection schemes for electrical equipment such as transformer, generator and motor.

Synopsis

This subject introduces the fundamental of power system protection and relaying, protection principle and coordination in power system network. Detail explanation on various type of protection schemes such as overcurrent protection, transformer protection, distance protection and differential protection. Also the theory and applications of the main components used in power system protection and device such as protection relay, circuit breaker (CB), CTs, VTs, will be discussed.

BEKP 4883

HIGH VOLTAGE ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify and analyze the conduction and breakdown theory in gas, solid and liquid dielectrics.
2. Explain the fundamental knowledge of generation and measurement of high voltage AC, DC and impulse.
3. Examine the high voltage testing, insulation coordination and diagnostics on materials and electrical apparatus.
4. Analyze the overvoltage phenomenon in electric power system.

Synopsis

This subject is intended give students deep knowledge about high voltage engineering it focusses on the characteristics of conduction and breakdown in gas, solid and liquid dielectrics. Generation of high voltages AC, DC and impulses, their measurements and testing techniques on materials and electrical apparatus according to standard are also covered. Students are also exposed to overvoltages phenomenon in electric power systems

BEKU 1123

ELECTRIC CIRCUIT I

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyse electrical circuit using Ohm's Law and Kirchhoff's Laws.
2. Apply Mesh and Nodal methods for DC and AC circuit analysis
3. Analyze DC an AC circuits using Superposition, Thevenin, Norton and Maximum Power Transfer Theorems.

Synopsis

This course introduces the students to Ohm's Laws, Kircchoff's Laws and use them to calculate current, voltage and power in electrical circuitries. Students also learn the analytical methods namely mesh and nodal analysis, as well as apply Thevenin theorem, Norton theorem, Superposition and the Maximum Power Transfer in circuit analysis. The applications of the above tools will cover both dc and ac circuits.

3. Nilsson and Riedel, Electric Circuits, Prentice Hall, Electric Circuits (9th Edition), 2010.

BEKU 2333

ELECTRIC CIRCUIT II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyze first order and second order circuit for transient and steady state response.
2. Apply Laplace transforms method to analyze circuit response in frequency domain.
3. Analyze the frequency response of RLC circuits and the characteristics of RLC filters.
4. Analyze various topology of two-port network in electrical circuit analysis.

Synopsis

This subject exposes student to the application of several techniques in analyzing electrical circuits, such as the laplace transform and two ports network. The students are required to use appropriate tools to analyze transient and frequency response in electrical circuit.

4. Thomas L. Floyd. Electric Circuits Fundamnetals. 8th Edition, Pearson, 2009.

BEKU 3695 INDUSTRIAL TRAINING

Learning Outcomes

Upon completion of this course, the students should be able to:

1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.
2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level.
4. Work affectively as an individual, team members and as a leader as well.
5. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis

All bachelor degree students are required to undergo industrial training as part of their curriculum to complete their four (4) years course for the Bachelor of Electrical Engineering (BEKG) and Bachelor of Mechatronic Engineering (BEKM). It is compulsory for all degree program students to undergo the Industrial Training Programme. In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors.

BEKU 4792 FINAL YEAR PROJECT 1

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Conduct proper literature survey and identify the problems, objectives and scope of project clearly

2. Select, plan and execute a proper methodology in problem solving
3. Present the project proposal in written and in oral format effectively
4. Work systematically and commit to professional ethics

Synopsis

This course is the first part of the Final Year Project which requires two semesters to complete. For the first semester as of this subject, student(s) and supervisor(s) are expected to have two way communications which later comes to an agreement of project topic leading to project supervision and project learning process collectively. At the end of the semester, students are required to deliver first year progress report which generally covers abstract, problem statement, objectives, scope of works, literature review, proposed methodology, early results and general conclusion. Sessions for oral presentation is also held to measure student's level of understanding and capability on carrying specified project.

References

Depend on each student project's references.

BEKU 4861 ENGINEERING SEMINAR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the professional engineering knowledge, practices and responsibilities.
2. Collect and sort relevant information with regards to the given technical talk.
3. Discuss current engineering issues and practices that impacting engineering professionals.

Synopsis

The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Through presentation by invited speakers from the industry and academia, students will be exposed to topics such as professional engineering bodies and knowledge of in contemporary issues in related engineering fields. Presentation by successful alumni describing how their careers developed after obtaining their undergraduate degrees will also be included.

BEKU 4894**FINAL YEAR PROJECT II****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Identify, formulate, research literature and analyze problem.
2. Conduct investigation using research based knowledge and methods.
3. Apply ethical principles in project implementation
4. Present the results in written and in oral format effectively.
5. Identify basic entrepreneurship skills in project management.
6. Apply reasoning informed by contextual knowledge.
7. Engage in independent and lifelong learning.

Synopsis

This course is the second part of Final Year Project I, in second semester. Students will continue their project from FINAL YEAR PROJECT I (BEKU 4792) during the second semester, and they should accomplish the projects completely either in hardware, software or both of them. Students needs to write-up a good final report (in thesis format), as a part of the course's assessment.

References

Depend on each student project's references.

BENG 1413**DIGITAL ELECTRONICS****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Describe the basic concept of digital circuits that form complex electronic systems.
2. Analyze the basic digital circuits based on combinational and sequential components.
3. Communicate effectively through effective report writing or oral presentation.

Synopsis

The outcome of this course is to deliver knowledge, understanding and application of the digital electronic circuits. This course comprises of several topics such as number systems and codes, logic gates and boolean

algebra, combinational logic circuits, MSI logic circuits and flip flops, and integrated circuit logic families. Students also will be exposed to design integrated circuit for the project assignment. This course will also expose the students to current application in the industry such as a Metal Oxide Semiconductor Field Effect Transistor (MOSFET), Complementary Metal Oxide Semiconductor (CMOS) technology and Integrated Circuit Packaging.

BENG 2143**ENGINEERING STATISTICS****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Apply the concepts of data description and probability, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems
2. Analyze engineering data using descriptive statistics
3. Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression

Synopsis

The outcome of this course is to deliver statistical techniques and tools for data analysis. The course begins with data description. Then, students will be exposed to normal and sampling distributions, estimation and hypothesis testing for one and two populations. In addition, ANOVA, simple linear regression, multiple linear regression and polynomial regression will be taught in this course. Apart from that, students will learn non-parametric statistics. Finally, students will apply their knowledge using statistical software application which are widely used in the industry.

BENG 4322 ENGINEER AND SOCIETY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply ethical principles and commitment, to professional ethics, responsibilities and norms of engineering practice
2. Apply reasoning informed by contextual knowledge to assess health, safety and legal issues and its subsequent responsibilities, relevant to professional practice
3. Understand the needs for sustainable development and the impact of engineering solutions on society and environment

Synopsis

This course will discuss about:

Ethics and professionalism, engineers and society, professional ethics, code of ethics, ethics dealing with human relations, BEM, IEM, regulations on professional conduct, route to professional status, engineers as an employee or employer, decision making, competence of practicing engineering, accountability, liability, engineer's legal liability specified in contract law, engineers and the environment, sustainability, etc.

SERVICE COURSES (FTMK)

BITG 1233 COMPUTER PROGRAMMING

Learning Outcomes

In the end of the course, student will be able to:

1. Identify the fundamental principles of problem solving, programming techniques and structures in program development.
2. Explain the principles of problem solving and programming techniques to solve given problems.
3. Construct computer program codes by applying suitable programming structures and techniques.

Synopsis

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

SERVICE COURSES (FKM)

BMCG 1013

DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic concept of first and second order differential equations, Laplace Transform and Fourier series.
2. Select an appropriate technique to solve problems involving differential equations.
3. Apply the concept of differential equations in solving engineering problems.

Synopsis

This course provides an introductory knowledge to differential equations and its applications. The students are introduced to the first order differential equations and solve using analytical methods of separable variable and linear equations and also using numerical methods such as Euler's method and second order Runge-Kutta method. Upon completion, the students are then introduced to the second order linear differential equations with constant coefficients and learn the methods of solving and its applications. The course is extended to the following chapters which include Laplace transform, Fourier series and partial differential equations and solving using numerical methods which is finite difference method (Parabolic, Hyperbolic).

BMCG 1523

ENGINEERING GRAPHICS AND CAD

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the engineering graphics fundamentals.
2. Construct technical drawing using manual sketching and computer aided design.
3. Communicate by using engineering drawings.

Synopsis

The course concentrates on manual drafting and Computer Aided Drafting (CAD) software. For manual drafting, students will be exposed to the basic drafting tools, techniques and the application in producing various types of engineering drawing. For computer aided design, CAD engineering drawing software is exercised to produce engineering drawing. The students will be exposed to CAD interface, editing commands, coordinate system, template preparation and layer in order to produce various types of engineering drawing.

BMCG 2432

INTRODUCTION TO MECHANICAL ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe basic concepts and fundamental principles of mechanical engineering mechanics.
2. Apply basic concepts and fundamental principles to solve mechanical engineering problems.
3. Analyze basic problems in mechanical engineering.

Synopsis

This course consists of basic principles of

Static: General principle, Force vector and Equilibrium of Particle

Dynamics: Apply Newton's 2nd Law in Kinematics and Kinetics of Particle,

Mechanics: Principle of Stress & Strain and Torsion

Thermodynamics: Property table of pure substance, Closed and open system with respect to first law of thermodynamics and refrigeration cycles.

BMFG 1313

ENGINEERING MATHEMATICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector-valued functions
2. Solve the mathematical problems that involve matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector-valued functions by using an appropriate technique
3. Apply the knowledge of engineering mathematics to deal with the engineering problems

Synopsis

This course consists of three chapters: Functions of Several Variables, Multiple Integrals and Vector-valued Functions. The syllabus is developed by introducing the concepts of the functions with severable variables, integration and also vector-valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

BMFG 1213

ENGINEERING MATERIALS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.
2. Analyze the properties of engineering materials based on its structure.
3. Describe the processing methods for engineering materials.

Synopsis

This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Introduction to the binary phase diagrams are also provided. Explanation on different types of engineering material (i.e. metal, ceramic, polymer, composites and functional), its mechanical properties, basic processing and applications are also included.

BMFG 4623 **ENGINEERING ECONOMY AND MANAGEMENT**

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles and terminology of engineering economy, concepts of time value of money, and risk planning.
2. Apply the concepts, principle and techniques in project management and engineering economy.
3. Analyze complex problems and scenario using engineering economy factors (F/P, P/F, P/A, A/P, F/A, A/F, P/G, A/G factors)
4. Evaluate and select between alternatives using suitable methods such as Present Worth, Future Worth, Annual Worth Analysis; Rate of Return and Breakeven & Payback Analysis.
5. Evaluate the project risk in engineering project.

Synopsis

The course covers engineering economy and managing project & risk. Engineering economy discusses about the time value of money and interest relationship; engineering economy factors; nominal and effective interest rates; worth analysis; breakeven and payback analysis; which are useful to define certain project criteria that are utilized by engineers and project managers to select the best economic choice among several alternative. Management of risk incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success or failure of the project.

SERVICE COURSES **(FPTT, PBPI & CO-CURRICULUM UNIT)**

BTMW 4012 **ENTERPRENEURSHIP TECHNOLOGY**

Learning Outcomes

In the end of the course, student will be able to:

1. Recognize the importance of entrepreneurship, the role of entrepreneurship in today's society, and the technical knowledge of the entrepreneurial process.
2. Explain the basic concepts of interdisciplinary competences in management, and create technology-based businesses.
3. Present a business plan project and develop an entrepreneurial profile.

Synopsis

The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

BLHC 4032 **CRITICAL AND CREATIVE THINKING**

Learning Outcomes

In the end of the course, student will be able to:

1. Identify the basic principles of critical and creative thinking skills to solve everyday problems
2. Provide feedback on issues related to the development of critical and creative thinking skills

- Solve problems of case studies on current issues related to their field of study
- Analyze future market requirements and propose a solution based products.

Synopsis

This course is designed to expose students to the principles foundation in critical and creative thinking. Students will apply the methods of critical thinking and creative problem-solving through a student-centered approach including approaches of problems based learning (PBL). Students will be guided in the final project where the analysis of future market requirements will be implemented and proposed solutions are based on the product market requirements from multiple perspectives and thinking outside the box.

BLHL 1012

MALAY COMMUNICATION I

Learning Outcome

Upon completion of this course, the student should be able to:

- Memberikan respon terhadap perbualan biasa dan situasi-situasi lain.
- Mengaitkan bunyi-bunyi atau ucapan dalam Bahasa Melayu dari segi nahu, fonologi dan kemahiran lisan tentang diri sendiri, keluarga, rakan-rakan and aktiviti harian.
- Membincangkan secara mudah tentang sesuatu topik semasa.
- Membina ayat dan bertutur dalam bahasa Melayu dengan gramatis.

Synopsis

Kursus ini memperkenalkan susuk tatabahasa bahasa Melayu. Pelajar didedahkan dengan aspek-aspek nahu, klausa, terminologi, binaan ayat, penjodoh bilangan dan unsur sastera. Diharapkan pelajar dapat menguasai pertuturan atau berkomunikasi dengan baik dan mudah berdasarkan kemampuan pelajar asing.

BLHL 1XX2

ARABIC

Learning Outcomes

In the end of the course, student will be able to:

- Use the basic Arabic grammar correctly and apply the information from the text
- Construct sentences and apply selected vocabulary in a report.
- Demonstrate communication skills.

Synopsis

This basic Arabic course adopts the communicate approach and introduces the phonology, grammar, vocabulary and writing system. Students will be exposed to basic reading materials in the languages.

**BLHL 1XX2
JAPANESE**
Learning Outcomes

In the end of the course, student will be able to:

1. Use grammar and classify the features of Japanese phonology correctly.
2. Demonstrate correct pronunciation.
3. Construct sentences and demonstrate writing skills.

Synopsis

This course is designed for students who do not have any background in Japanese. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. The grammar introduced is related to the language used daily by the Japanese. In addition, two types of Japanese language writing systems; Hiragana and Katakana are also introduced. Students are also exposed to elementary reading materials.

**BLHL 1XX2
MANDARIN**
Learning Outcomes

In the end of the course, student will be able to:

1. Demonstrate the ability to converse in Mandarin with correct and accurate pronunciation and intonation.
2. Use the rules of Chinese writing and the theory of word and sentence formation.
3. Interpret the information in the simple text.

Synopsis

This course is designed for students who do not have any background in Mandarin. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. This course aims to help students to obtain enough exposure of the Mandarin phonetics (Han yu pin yin). The grammar introduced is related to the language used daily by Chinese. Particular care is also taken to ensure that the complexity of the dialogues is gradually developed using simple to complex sentences.

BLHW 1702
TAMADUN ISLAM DAN TAMADUN ASIA (TITAS)
Learning Outcomes

In the end of the course, student will be able to:

1. Menjelaskan konsep asas ketamadunan
2. Menghubunkait sejarah dengan kemajuan tamadun bangsa di dunia
3. Menganalisis isu dan cabaran peradaban dunia

Synopsis

Mata pelajaran ini menjelaskan tentang ilmu ketamadunan yang mencakupi pengenalan ilmu ketamdunan, Tamadun Melayu teras Tamadun Malaysia dan Tamadun Islam. Selain itu, turut dibincangkan berkaitan Tamadun China, Tamadun India serta isu-isu semasa dan masa depan dunia berbagai tamadun.

BLHW 1742 MALAYSIAN STUDIES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the political and economic structure of Malaysia.
2. Respond to the uniqueness of the Malaysian's historical and cultural heritage.
3. Compare the Malaysian experience and achievement with their home countries in various aspects.

Synopsis

By going through this course, students will be exposed to a wealth of information on Malaysia. They will gain information on Malaysian's historical background, political system and socio-economic structure. Additionally, this course highlights the Malaysian government's development plans and major policies in economic, industrial and socio-cultural aspects. It also gives emphasis on the attitude and commitment of the Malaysian government towards the regional and international issues as reflected in its foreign policy.

BLHW 2712 ETHNIC RELATIONS

Learning Outcomes

In the end of the course, student will be able to:

1. Menganalisis peranan hubungan etnik dan kepentingannya dalam proses pembangunan Malaysia.
2. Menghubunkait respons tentang isu dan cabaran etnik budaya di Malaysia.
3. Merumus isu-isu perpaduan dan cadangan untuk memperkasakannya di Malaysia.

Synopsis

Mata pelajaran ini memfokuskan perbincangan tentang konsep-konsep asas budaya dan hubungan etnik. Ia juga member pendedahan perkembangan hubungan etnik bagi mewujudkan masyarakat menurut acuan Malaysia. Selain itu, matapelajaran ini dapat member kefahaman dalam menangani cabaran global yang berkaitan hubungan budaya dan etnik di peringkat Malaysia.

BLHW 2752 MALAYSIAN CULTURE

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Discuss issues related to Malaysian culture.
2. Present issues related to Malaysian culture.
3. Reflect the scenario of cultural diversity in Malaysia.
4. Describe an element in Malaysian culture

Synopsis

This course exposes international students to the socio-cultural background of Malaysia which includes ethnic composition, religions, traditions and values. Other elements like music, arts, cuisine, costume, ethnic games, celebrations and national festivals are also highlighted. Student Centered Learning (SCL) methods such as group discussion and presentation will be used in order to assist international students in developing their understanding and appreciation of Malaysian culture.

BACHELOR OF MECHATRONICS ENGINEERING (BEKM)

BACHELOR OF MECHATRONICS ENGINEERING - BEKM

The Bachelor of Mechatronics Engineering is a synergistic combination of several engineering disciplines; namely electrical & electronic, mechanical, control, and computer systems design. This program aims to produce graduates who are competent in creating, designing and producing mechatronics products that consist of mechanical and electronic systems which require control of the computer system.

PROGRAMME IMPLEMENTATION - BEKM

This programme would take four (4) years minimum and consist of at least 135 credit hours. The programme emphasise on Mechatronics Engineering with the composition of the credits are as follows:

Components		Credit Hours	Percentage
University Requirements (W)		14	10.4%
Core (P)	Common	35	25.9%
	Program	71	52.6%
	Industrial Practical	5	3.7%
Electives (E)	University	4	3.0%
	Program	6	4.4%
Total		135	100%

This programme emphasizes on theoretical and tutorials, computer-aided learning, and problem-based learning (PBL). It also encourages active and cooperative learning activities other than carrying out assignments, job workshops, industrial training and final year project.

CURRICULUM STRUCTURE - BEKM

Students are required to keep record of their obtained grades for a given course as shown in Appendix C (Student Audit Form - BEKM) for graduation purpose.

COMPULSORY FOR LOCAL STUDENTS ONLY

* COMPULSORY FOR INTERNATIONAL STUDENTS ONLY

** OPTIONAL

SUBJECT DETAILS FOR BACHELOR PROGRAMME (BEKM)

BEKB 1131 ELECTRICAL ENGINEERING WORKSHOP I

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct three phase motor starter control circuit.
2. Apply the basic concept for electrical simulation using Pspice and PROTEUS simulation tools.
3. Apply the basic concept for electrical schematic diagram using AUTOCAD tools
4. Apply the basic microcontroller programming language for dynamic mechanism application.
5. Demonstrate team work and present the results in oral and technical report writing.

Synopsis

This course will let students to practice with Pspice, PROTEUS, Arduino and AUTOCAD simulation tools to solve simple engineering problem. Students also will be introduced with three phase motor starter which is cover on DOL, Forward-Reverse and STAR/DELTA connection.

BEKB 1231 ELECTRICAL ENGINEERING WORKSHOP II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Construct three phase motor starter control circuit.
2. Apply the basic concept for electrical schemetic diagram using AUTOCAD tools.
3. Apply the basic microcontroller programming language for dynamic mechanism application.
4. Demonstrate team work and present the results through oral and technical writing.

Synopsis

This course will let students to practice with Arduino and AUTOCAD simulation tools to solve simple engineering problem. Students also will be introduced with three phase motor starter which is cover on DOL, Forward-Reverse and STAR/DELTA connection.

BEKC 2421

CONTROL SYSTEM ENGINEERING LABORATORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Design experiments according to the requirement of Control and Instrumentation System Engineering experiments.(PO4)
2. Analyze and interpret data and synthesize information related to Control and Instrumentation System Engineering experiments.(PO4)
3. Demonstrate practical competence in using Control and Instrumentation System Engineering software and apparatus.(PO5)
4. Report the findings in a way that is appropriate to the targeted audience. (PO9)

Synopsis

This laboratory provides students with practical activities related to signal and system as well as control and instrumentation theories. Students will carry out experiments regarding AC and DC bridges using oscilloscope, as well as modelling of open and closed loop system by using Lab-Volt Temperature Process Control Trainer. The simulation part covers practical application involving Real-time implementation based on problem-based learning design using MATLAB, SIMULINK, and Control System Toolbox, as well as simulation of Discrete-Time & Continuous-Time Signal and Fourier series using Symbolic Toolbox. Student will be exposed to methods to conduct and report investigation work including design of experiment, analysis of data, synthesis of information and evaluation of findings.

BEKC 2433

SIGNALS & SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the basic knowledge of signals and systems for continuous-time and discrete-time signals.
2. Analyze the linear time-invariant (LTI) systems in time-domain and frequency-domain.
3. Analyze the LTI systems using Z-Transform method.

Synopsis

This course will discuss about the introduction to signals and systems; classification of signals and systems; linear time-invariant systems and convolutions; Fourier series and Fourier transform; Fourier analysis for continuous-time and discrete-time signals; and Z-transforms method.

BEKC 2453

COMMUNICATION SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic principles of analogue & digital communication, data and computer network
2. Analyse the analogue and digital communication techniques that are typically used in communication systems
3. Explain the concept of computer system network

Synopsis

Topics covered are: Introduction to Telecommunications, Transmission Modes, Power Measurements, Electromagnetic Frequency Spectrum, Bandwidth and Information Capacity, Amplitude Modulation Transmission & Reception, Single-Sidebands Communications Systems, Angle Modulation Transmission & Reception, FM Stereo, Noise in Telecommunication Systems, Digital Communication, Digital Transmission, PCM, Digital Modulation / Demodulation, ASK, FSK, PSK, Data Communication & Computer Network. Frequency Division Multiplexing, Time Division Multiplexing, Space Division Multiplexing.

BEKC 3533

INTRODUCTION TO CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the basic features and configuration of control systems and derive the mathematical model of physical system in frequency and in time domain.
2. Analyze control system performance and stability of linear control system in time and frequency domain.
3. Able to employ root locus method and its role in control system design.
4. Analyze the asymptotic approximation bode plots performances for first order and second order systems.

Synopsis

This course will introduces the students to the fundamental ideas and definition of control systems such as block diagrams, plants or processes, open-loop and close loop control systems, transfer functions, and transient and steady state responses. Students will be taught how to obtain mathematical models for actual physical systems such as electrical, mechanical, electromechanical and simple fluid flow systems in transfer function and state space equation. Methods of system representation such as block diagram representation and signal flow graphs will be examined. The students will also be exposed to techniques of analysing control systems such as time domain analysis and stability. Besides, the student will be taught on the design techniques such as Root locus and Bode plot. Finally, an introduction to

the design and analysis of control systems using MATLAB will also be given.

BEKC 3543

MICROPROCESSOR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and explain microprocessor (Motorola 68000) architecture and its operation. Able to illustrate the interfacing circuitry of microprocessor-based systems and its supporting components.
2. Write and apply the 68k Microprocessor instruction set operation in assembly language.
3. Describe and distinguish the concept of the Motorola 68000 microprocessor system with memory and peripheral device interface.
4. Develop and construct a microprocessor-based system and solve the problem related and prepare the technical report.

Synopsis

This course is about hardware and microprocessor handling, type of microprocessor systems, system handler and timing diagrams. The course covers the concept of MC68000 microprocessor software architecture, programming, assembly language and basic instruction, data transferring instruction, program control and subroutine, arithmetic and logic operations. It touches most on programming techniques, designing a microcomputer system, interfaces with memory and I/O devices. Students will experience PBL approach in this course where a PO-PBL will be introduced to the student.

BEKC 3643

CONTROL SYSTEM ENGINEERING

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Understand and interpret control systems characteristics and specifications.
2. Analyze the problems of a system and point out the proposed solution.
3. Design and construct the compensators in time domain, frequency domain and state variable feedback systems.

Synopsis

This subject addresses compensator design in control systems engineering. In particular, the design of active and passive compensators via root locus technique; passive compensator via frequency response technique; state feedback controller design using pole placement technique; integral control and observer design via pole placement technique. The compensator design concentrates on systems that can be modeled by Ordinary Differential Equations (ODEs), and that satisfy certain linearity and time-invariance conditions. Student must have sufficient knowledge in differential equations, basic concepts of control systems and signals & systems.

BEKC 4753

PLC & AUTOMATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the principles and fundamentals of programmable logic controllers (PLCs) and elements of automations system.
2. Use tools and equipments for PLC programming that related to industrial applications.
3. Design a basic automated PLC based system with consideration for specific needs.
4. Demonstrate communication skill through team work activities effectively.

Synopsis

This course will expose students with knowledge and skills of PLC including its principles and fundamental, main hard components, PLC programming languages, interfacing PLC with computers, integrating PLC hardware and software to design an automation system, introduction to automation system in manufacturing process, computer-integrated manufacturing (CIM) and industrial communication networking.

BEKC 4683

DIGITAL CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Transform continuous-time signals into discrete-time signals and to represent LTI digital control systems in z-domain.
2. Analyze the stability and performance of digital control systems in time, frequency, and z domains.
3. Analyze the digital control systems represented in state space model.

- Design a digital PID controller and digital lead-lag compensators using root locus and frequency response methods, and state feedback using a pole-placement method.

Synopsis

This subject consists of discussions about an introduction to digital control systems, the relationship between continuous-time and discrete –time control systems, digital system coding, sampling process, quantization and z-transform, and digital control system representations. The notions of controllability, observability, and stability of digital control systems and analyses in time, frequency, and z domains are also included in this subject. The design of digital PID controllers, lead-lag compensators, and state feedback and observer gain via a pole placement are covered in this subject. The analyses and design of digital control systems are performed using MATLAB and Simulink. Students are encouraged to gain scientific knowledge of contemporary issues related this subject.

BEKC 4773

INTELLIGENT CONTROL SYSTEMS

Learning Outcomes

Upon completion of this course, the student should be able to:

- Utilize the simulation tools for AI applications such as Simulink and MATLAB for appropriate industrial case studies.
- Design basic fuzzy logic or neural network systems according to the engineering problem.
- Demonstrate and analyze the performance of fuzzy logic and/or neural network using Simulink/MATLAB or other specified tools

Synopsis

Artificial Intelligence (AI) is a field of study concerns on allowing machines to imitate human's thinking or behaviour. By applying AI techniques, machines would be able to solve complex engineering problems such as predicting numbers of defect products in factory, optimizing a water tank system, classifying patients based on symptoms of a disease and etc. In this course students will be focusing on two popular sub topics in Artificial Intelligence area which is Neural Network and Fuzzy Logic. Students will be exposed towards the concept of Neural Network and/or Fuzzy Logic and its implementation methods in controlling engineering system using appropriate tools such as SIMULINK/MATLAB.

BEKC 4883

ADVANCED MANUFACTURING SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

- Explain the principles of manufacturing operation in advanced manufacturing system.
- Investigate the operation of manufacturing system in advanced manufacturing industries.
- Design an assembly line for production system using manufacturing system approach.

Synopsis

This subject is introduction to industrial field topics such as production system, manufacturing system, manufacturing operation, manufacturing models and metrics besides exposure to manual assembly lines and automated assembly lines which applicable in industry. The analysis of quality control and quantitative analysis in FMS bottleneck

models in this and product design using CAD/CAM in production system.

BEKE 2422

ANALOGUE ELECTRONICS APPLICATION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the operation of small signal analysis and power amplification for electronics analogue devices.
2. Analyze the BJT, power amplifier, active filter, oscillator and voltage regulator.
3. Design active filter circuit, oscillator and voltage regulator in solving electrical engineering problem.

Synopsis

This course contains the application of electronic analogue devices in solving electrical engineering problems; focuses on small signal analysis (BJT), power amplification, active filter, oscillator and voltage regulator. In power amplification, three classes of the power amplifier are introduced which are power amplifier class A, class B and class AB. The active filter covers the usage of transistor or op-amps with RC circuit in producing the low-pass filter, high-pass filter, band-pass filter and band-stop filter. The wave generation using op-amp and timer 555 is applied in the oscillator part. Finally, the concept of voltage regulator based on transistor for linear shunt and series regulator as well as the integrated circuit voltage regulator is covered.

BEKG 1123

PRINCIPLES OF ELECTRIC AND ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic electrical and electronics principles, circuit schematics and components.
2. Solve basic electric DC circuits using electrical and electronics principles
3. Explain the operating principles of semiconductor devices for Diode, BJT, FET and Op Amp.
4. Analyze the operating principles of semiconductor devices and electrical and electronics to solve the Diode, BJT, FET and Op-Amp circuits.

Synopsis

This course will discuss about the basic principles of electrical and electronics; such as fundamental knowledge on electric element, principles of electricity, units associated with basic electrical quantities, symbol and components. Then the study on how to apply circuit theory to the solution of simple circuits and networks by the application of Ohm's law and Kirchhoff's laws, and the concepts of potential and current dividers in solving DC series and parallel circuit is explained. Then, the behaviour of semiconductors and the way in which they are employed in diodes will be discussed. The semiconductor theory and devices covers the atomic structures, energy band, P-type and N-type and how these materials are employed to form devices such as diode and BJTs. Then the application and calculation of diode, DC biasing of Bipolar Junction Transistor(BJT),DC biasing of Field Effect Transistor (FET) and Operational-Amplifier (Op-Amp) circuits is explained.

BEKG 1233**PRINCIPLES OF INSTRUMENTATION AND MEASUREMENT****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Describe the principle, various terms and standards in measurement.
2. Explain the principle of measurement devices
3. Apply the suitable bridge techniques to measure component values such as resistance, inductance and capacitance.
4. Explain the operation, function and applications of the transducers/sensors.

Synopsis

This course will discuss about units and dimensions, standards, errors, static characteristic, noise and calibration in measurement. It covers most on the measurement devices such as galvanometers, ammeters, voltmeters, wattmeter, temperature, force and torque and pressure measurement as well as accelerometer meter. It also introduces oscilloscope and sensors for instrumentation application.

BEKG 2433**ELECTRICAL SYSTEMS****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Explain the major components of an electrical power system (generation, transmission, and distribution system)
2. Calculate the AC voltage and current characteristic in AC circuits.
3. Analyze the single and three phase circuits by emphasizing on complex power and power factor correction
4. Analyze the magnetic, single phase transformer and three phase transformer equivalent circuits.

Synopsis

This subject introduces students to topics such as alternating current circuit analysis, phasor representation, RMS value, average power, reactive power, active power, apparent power, power factor and power factor correction for single phase and balanced three phase system. In addition, magnetic circuit, construction and operation of transformer will be discussed in this subject.

BEKG 2452**NUMERICAL METHODS****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Use various numerical methods to find roots for nonlinear equations and solve for linear systems.
2. Determine polynomials using interpolation and curve fitting.

3. Apply numerical methods in differentiation, integration, ordinary differential equations and partial differential equations to solve the mathematical problems.
4. Implement numerical methods in solving engineering problems.

Synopsis

Topics covered: Errors; Solution of Nonlinear Equations; Solution of Linear Systems; Interpolation and Curve Fitting; Eigenvalues and Eigenvectors; Numerical Differentiation; Numerical Integration; Solution of Ordinary Differential Equations; Solution of Partial Differential Equation.

BEKM 2321

MECHANICAL ENGINEERING LABORATORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Conduct investigation on the experiments which includes statics and mechanics of material, dynamics and mechanisms, and fluid mechanics correctly using mechanical resources.
2. Analyze data gathered during experiments using software tools.
3. Communicate effectively through technical report writing.

Synopsis

This mechanical laboratory experiments will cover three courses, Statics and Mechanics of Material, Dynamics and Mechanisms and Fluid Mechanics. Axially loaded test, shear and torsion tests will cover the Statics and Mechanics of Material course. Laboratory experiments for Dynamics and Mechanisms consists of accelerated rotational movement,

belt drives and gear efficiency and Fluid Mechanics will cover Bernoulli theorem and Reynolds number.

BEKM 2342

INTRODUCTION TO MECHATRONICS SYSTEMS

Learning Outcomes

Upon completing this course, the student should be able to:

1. Explain basic concept of mechatronic systems.
2. Explain the working principles of mechatronic systems.
3. Analyze selection and integration of mechatronics components.
4. Identify and analyse basic mechatronic system.

Synopsis

This course introduces the concept of mechatronic system and its element and integration. Topics that are covered includes the following: Introduction to sensors and transducers, performance terminology, static and dynamic characteristics. Example of relevant sensors, selection of sensors. Inputting data by switches. Introduction to signal conditioning, operational amplifier, protection, filtering, wheatstone bridge, digital signal, multiplexers, data acquisition, digital signal processing, pulse modulation. Displays, data presentation elements, magnetic recording, displays, data acquisition systems, testing and calibration. Introduction to actuation systems, introduction to pneumatic and hydraulic systems, directional control valves, pressure control valves, cylinders, process control valves, rotary actuators. Introduction to mechanical systems, types of motion, kinematic chain, cams, gear trains, ratchet and pawl, belt and chain drives, bearings, mechanical aspects of motor selection. Introduction to electrical systems, mechanical switches, solid-state switches, solenoids, D.C. motors, A.C. motors, stepper motors. Mathematical models, mechanical system building blocks, electrical system building blocks, fluid system building blocks, thermal system building blocks. System model of engineering systems, rotational-translational systems, electromechanical systems and hydraulic-mechanical systems. Brief description of mechatronics system related topics: system transfer

function, frequency response, closed loop controller, digital logic, microprocessor, assembly language, C language, input/output systems or interfacing, programmable logic controllers, communication systems, fault finding.

BEKM 3453

MICROCONTROLLER TECHNOLOGY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe and explain a microcontroller's architecture, operations of peripherals and subsystems, internal registers, program compilation and simulation.
2. Apply interrupt functions, digital sensory system and develop a functioning system using the microcontroller.
3. Control Direct Current (DC), servo and stepper motors using microcontroller and relevant driver circuit(s).
4. Explain and interface the microcontroller's Analog to Digital converter, serial communication, with external devices such as memory, analog sensors, Liquid Crystal Displays (LCD) and keypad.
5. Develop and integrate a microcontroller based system application and analyze the problem related for troubleshooting for problem solving recommendation.
6. Utilize the microcontroller based system application software or hardware for compilation and transferring machine code.
7. Explain the design solution in presentation, technical report, and product video.

Synopsis

Basic concept of microcontroller in terms of the architecture, usage and the differences between microcontroller and microprocessor. Exploring the available PIC Modules such

as Timers, Analog to Digital Converter, Pulse Width Modulation, EEPROM, USART and interrupt capabilities for external or internal peripheral and hardware controlling. Students will practically implement the knowledge to apply in the project oriented Problem Based Learning.

BEKM 3543

ELECTROMECHANICAL SYSTEM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Comprehend the basic principle of electromechanical energy conversion and operation of electrical machines.
2. Investigate and analyze the torque speed characteristics of electric motors and their corresponding drive requirements
3. Design the drive for electrical motors according to application requirements and appropriate mechanical model

Synopsis

This course focuses on the applications of electrical machines as primary mover for mechanical systems. Students are introduced to the basic principle of electromagnetics and the constructions of electrical machines. Then, an emphasis is put on electric motors and how to control them. Finally, students are exposed to general steps required in analyzing a drive system for mechanisms, modelling the mechanism's dynamics and selecting appropriate motor and its drive for the application.

BEKM 3641

MECHATRONICS ENGINEERING LABORATORY I

Learning Outcomes

Upon completion of this laboratory course, the student should be able to:

1. Design and analyze a controller for mechatronics system by using PLC.
2. Design and demonstrate the appropriate solution to actuate a mechatronic system by using pneumatic and hydraulic circuits.
3. Analyze and evaluate the accuracy of the integrated PLC and electropneumatic system performance by using statistical method.
4. Exhibit technical writing to solve complex problem.

Synopsis

In this lab session, students are exposed to the lab works of major fluid power technologies; pneumatics and hydraulics as well as the lab works in automation using Programmable Logic Controller (PLC). In fluid power technology, students will learn the operation of a single acting and double acting cylinder, the application of electro-pneumatic and electro-hydraulic control technology, the application of pressure relief valve and flow control valve as well as the logic "AND" and "OR" operation. In automation, the students will be enlightened to draw the ladder diagram, perform console programming and mnemonic code using PLC as well as designing and executing timer and counter application. Finally, students will carry out the pneumatic and hydraulic control programming using PLC.

BEKM 3653

INTEGRATED DESIGN PROJECT

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Design solutions by synthesizing electrical engineering knowledge that will solve complex electrical engineering problem in accordance to relevant standards and with appropriate consideration for public health and safety, cultural, societal, environmental and sustainability factors.
2. Utilize modern engineering and IT tools in facilitating solution to complex electrical engineering problems with an understanding of the limitations.
3. Evaluate the impact of the designed product, components or processes, in terms of safety, environmental and sustainability factors.
4. Demonstrate effective teamwork skills in completing the electrically integrated design project.
5. Apply project management and financial knowledge effectively in completing the electrically integrated design project.

Synopsis

Electrical engineering project is integrated design project where student have to design project where students have to design an electrical and electronic engineering project including project management, project planning, project feasibility study, design selection, design costing and sizing, analysis and evaluation. The course focuses on the implementation and integration of product/conceptual design development to produce a comprehensive final technical report, including engineering proposals and drawings, specifications and bills of quantities, cost estimates of development projects given to students, working in groups. Apart from basic electrical and electronic design, students are also required to integrate their knowledge of other engineering such as (but not limited to) circuit design and analysis, including component selections, project scheduling techniques and sustainable development considerations into their overall project work. At the end of this course, the students will be able to comprehend the needs and requirements for product design procedures and are able to appreciate the importance of integration and synthesis of various of electrical engineering knowledge.

BEKM 4751**MECHATRONICS ENGINEERING LABORATORY II****Learning Outcomes**

Upon completion of this laboratory course, the student should be able to:

- Identify and describe robot specification and workspace properly.
- Design procedures to manipulate robot movement by using teach pendant/console and RoboTalkTM programming software.
- Design procedure to develop a robotic gripper and test it using Rhino robot.
- Analyze and evaluate the accuracy, repeatability and reliability of the robot performances by using statistical method.

Synopsis

In this course, students are exposed to the lab works related to the development and application of mechatronic/robotic system. Firstly, student will learn the robotic system specification. After that, students will design procedures to develop a robotic gripper and program the robot to a specific task. In the design process, students will be exposed to the engineering tools such as Solid Work, teach pendant/console programming and RoboTalkTM software. Student design should take into account the appropriate sensor, controller and actuator for their design for safety purpose. At the end of the lab work, students will analyze and evaluate the accuracy, repeatability and reliability of the robot performances by using statistical method.

BEKM 4763**ROBOTICS****Learning Outcomes**

Upon completion of this course, the student should be able to:

- Apply knowledge in physics and mathematics to the solution of complex kinematics and dynamics.
- Analyze the effects of controller gains on the motion of a robotics system.
- Design robot trajectories based on safety and environmental needs.

Synopsis

This subject introduces robotic fundamentals including kinematics (forward, reverse, jacobian, singularity), dynamics and trajectory generation of robots. Fundamental mathematics, scientific and mechatronics engineering knowledge will be applied in this subject to the solution of complex robotic problems. In developing the solution of the robotics problem, student will be exposed to influential factors that might affect the design of the solution including safety and environmental factors. Throughout the semester, student will be exposed to robotics simulation software to enhance their understanding of robotics knowledge.

BEKM 4783 MACHINE VISION

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the application areas, restrictions, and structure of machine vision systems.
2. Identify the operation of digital images: capture them and extract basic visual information from images.(P03)
3. Analyze and apply the basics of machine learning and approaches to decision making.
4. Implement an algorithm using an image processing and image understanding tools.
5. Exhibit soft skills such as communication skills, spirit of teamwork and life-long learning.

Synopsis

This course is to introduce the theory, applications and techniques of machine vision to students, and to provide students with an understanding of the problems involved in the development of machine vision systems. The course begins with low level processing and works its way up to the beginnings of image interpretation. This approach is taken because image understanding originates from a common database of information. The learner will be required to apply their understating of the concepts involved through the process of building applications that manipulate bi-level and grey scale images through the use of suitable packages (e.g. Matlab or OpenCV).

BEKM 4823 DATA COMMUNICATIONS & COMPUTER NETWORKING

Learning Outcomes

Upon completion of this course,the student should be able to:

1. Explain and apply the schemes and methods used for tasks in data communication of computer network.

2. Describe and analyze the coding schemes, transmission modes, transmission methods, communication modes, error detection methods, flow control, and error control in a network.
3. Classify the OSI model, IEEE 802.x model, transmission media, network services, repeater, bridges, router and gateways.
4. Describe and analyze the network operation and technology of LAN, wireless Lan, Wan and routing.
5. Design a basic network configuration for local area network (LAN).

Synopsis

Topics covered are: Introduction to Computer Network, Data Communications, Network Structure, Local Area Network, Wide Area Network, Interconnection, Internetworking. That include the network models / topology / type and technology and its application. Characteristics of analog signals, digital signals, coding schemess, transmission modes, transmission methods, communication modes, bandwidth and signal transmission, digital signal encoding, error detection method, error and flow control, datalink control, multiplexing, synchronous & asynchronous transmission. Standard organization and OSI model, LAN topology, wired & wireless LAN, circuit switching, packet switching and comparison. Interconnection issues and architecture. Repeater, bridge, router & gateway. Structure of network layer. Internet Protocol, TCP/IP ans ISO Internet Protocol.

BEKU 1123 ELECTRIC CIRCUIT 1

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Analyse electrical circuit using Ohm's Law and Kirchhoff's Laws.

2. Apply Mesh and Nodal methods for DC and AC circuit analysis.
3. Analyze DC and AC circuits using Superposition, Thevenin, Norton and Maximum Power Transfer Theorems.

Synopsis

This course introduces the students to Ohm's Laws, Kirchhoff's Laws and use them to calculate current, voltage and power in electrical circuitries. Students also learn the analytical methods namely mesh and nodal analysis, as well as apply Thevenin theorem, Norton theorem, Superposition and the Maximum Power Transfer in circuit analysis. The applications of the above tools will cover both dc and ac circuits.

BEKU 1231

ELECTRICAL & ELECTRONICS ENGINEERING LABORATORY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Measure the electrical characteristics of single-phase and three-phase ac circuit precisely.
2. Construct the combination of logic circuit and ICs using suitable and appropriate components.
3. Perform simulations of RLC circuits in order to study their characteristics.
4. Exhibit good communication skills through technical writing.

Synopsis

This course will expose students to perform experiments to support the theory such as to observe the capacitor charge and discharge process, build and analyze the second order circuit using opspice. The experiments also include the single phase and three phase circuits with resistive and inductive loads and measurement of voltage, current, power, power factor and single phase transformer. Lastly student will conduct experiments with logic circuit integration, ics and flip-flops circuit

BEKU 3695

INDUSTRIAL TRAINING

Learning Outcomes

Upon completion of this course, the students should be able to:

1. Apply appropriate techniques and technical knowledge which is relevant for student field of study.
2. Demonstrate the ability to adapt with working environment and practice working efficiently and ethically.
3. Demonstrate soft skill especially communication skill at all level.
4. Work affectively as an individual, team members and as a leader as well.
5. Acquire new knowledge, life-long learning and aware to new technology.

Synopsis

All bachelor degree students are required to undergo industrial training as part of their curriculum to complete their four (4) years course for the Bachelor of Electrical Engineering (BEKG) and Bachelor of Mechatronic Engineering (BEKM). It is compulsory for all degree program students to undergo the Industrial Training Programme. In general, the aim of industrial training are to give exposure, experience and professional skills to various aspects of engineering discipline, in particular in electrical engineering related industries. The students are also expected to be familiarized with efficient, accountable and ethical conduct as they will be supervised directly under the company's personnel as well as supervisors from the faculty. Apart from that, the assessment will be made by the appointed faculty supervisors & the industry supervisors.

BEKU 4861

ENGINEERING SEMINAR

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify the professional engineering knowledge, practices and responsibilities.
2. Collect and sort relevant information with regards to the given technical talk.
3. Discuss current engineering issues and practices that impacting engineering professionals.

Synopsis

The main purpose of this course is to instill the recognition of the need for and the ability to engage in life-long learning among students. Through presentation by invited speakers from the industry and academia, students will be exposed to topics such as professional engineering bodies and knowledge of in contemporary issues in related engineering fields. Presentation by successful alumni describing how their careers developed after obtaining their undergraduate degrees will also be included.

BEKU 4792

FINAL YEAR PROJECT 1

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Conduct proper literature survey and identify the problems, objectives and scope of project clearly
2. Select, plan and execute a proper methodology in problem solving
3. Present the project proposal in written and in oral format effectively
4. Work systematically and commit to professional ethics

Synopsis

This course is the first part of the Final Year Project which requires two semesters to complete. For the first semester as of this subject, student(s) and supervisor(s) are expected to have two way communications which later comes to an agreement of project topic leading to project supervision and

project learning process collectively. At the end of the semester, students are required to deliver first year progress report which generally covers abstract, problem statement, objectives, scope of works, literature review, proposed methodology, early results and general conclusion. Sessions for oral presentation is also held to measure student's level of understanding and capability on carrying specified project.

References

Depend on each student project's references.

BEKU 4894

FINAL YEAR PROJECT II

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Identify, formulate, research literature and analyze problem.
2. Conduct investigation using research based knowledge and methods.
3. Apply ethical principles in project implementation
4. Present the results in written and in oral format effectively.
5. Identify basic entrepreneurship skills in project management.
6. Apply reasoning informed by contextual knowledge.
7. Engage in independent and lifelong learning.

Synopsis

This course is the second part of Final Year Project I, in second semester. Students will continue their project from FINAL YEAR PROJECT I (BEKU 4792) during the second semester, and they should accomplish the projects completely either in hardware, software or both of them. Students needs to write-up a good final report (in thesis format), as a part of the course's assessment.

References

Depend on each student project's references.

SERVICE COURSES (FKEKK)

BENG 1413

DIGITAL ELECTRONICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Describe the number system, basic concept and terminology of digital circuits that form complex electronic systems.
2. Analyze the basic digital circuits based on combinational and sequential components.
3. Communicate effectively through effective report writing or oral presentation.

Synopsis

The outcome of this course is to deliver knowledge, understanding and application of the digital electronics. The course begin with the introductory concepts of digital technology, number systems and codes. Then, logic gates and Boolean algebra will be explored. Apart from that, combinational logic circuits and functions of combinational logic will be introduced. Students will also be enlightened with latches and flip-flops. Finally, this course will also introduce integrated circuit technology where students also will be explored to semiconductor technology for the project assignment. This course will also expose the students to current application in the digital electronics industry.

BENG 2143

ENGINEERING STATISTICS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply the concepts of data description, normal and sampling distributions, estimation and hypothesis testing, ANOVA, regression and non-parametric tests to solve mathematical problems.

2. Analyze engineering data using descriptive statistics.
3. Deduce statistical inference for engineering problems by using the techniques of estimation, hypothesis testing and regression.

Synopsis

Topics covered: Data description and probability, Normal and Sampling Distributions, Estimation and Hypothesis Testing for one and two populations, ANOVA, Simple Linear Regression, Multiple Linear Regression, Polynomial Regression, Non-parametric Statistics and Software application (SPSS).

BENG 4322

ENGINEER AND SOCIETY

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply ethical principles and commitment, to professional ethics, responsibilities and norms of engineering practice
2. Apply reasoning informed by contextual knowledge to assess health, safety and legal issues and its subsequent responsibilities, relevant to professional practice

- Understand the needs for sustainable development and the impact of engineering solutions on society and environment.

Synopsis

This course will discuss about:

Ethics and professionalism, engineers and society, professional ethics, code of ethics, ethics dealing with human relations, BEM, IEM, regulations on professional conduct, route to professional status, engineers as an employee or employer, decision making, competence of practicing engineering, accountability, liability, engineer's legal liability specified in contract law, engineers and the environment, sustainability, etc.

SERVICE COURSES (FTMK)

BITG 1233 COMPUTER PROGRAMMING

Learning Outcomes

In the end of the course, student will be able to:

- Identify the fundamental principles of problem solving, programming techniques and structures in program development.
- Explain the principles of problem solving and programming techniques to solve given problems.
- Construct computer program codes by applying suitable programming structures and techniques.

Synopsis

This course covers the introductory topics in programming using C++ language. It includes the introduction to computers and programming, the fundamentals of

programming, problem solving and software development. Data types and operators, selection, repetition, function, array, file, structured data and pointer are among the topics covered in the course.

SERVICE COURSES (FKM)

BMCG 1013 DIFFERENTIAL EQUATIONS

Learning Outcomes

Upon completion of this course, the student should be able to:

- Describe the basic concept of first and second order differential equations, Laplace Transform and Fourier series.
- Select an appropriate technique to solve problems involving differential equations.
- Apply the concept of differential equations in solving engineering problems.

Synopsis

This course provides an introductory knowledge to differential equations and its applications. The students are introduced to the first order differential equations and solve using analytical methods of separable variable and linear equations and also using numerical methods such as Euler's method and second order Runge-Kutta method. Upon completion, the students are then introduced to the second order linear differential equations with constant coefficients and learn the methods of solving and its applications. The course is extended to the following chapters which include

Laplace transform, Fourier series and partial differential equations and solving using numerical methods which is finite difference method (Parabolic, Hyperbolic).

BMCG 1123

STATICS & MECHANICS OF MATERIAL

Learning Outcomes

Upon completion of this course, the student should be able to:

1. State the basic concept of force and material mechanics.
2. Identify the force and stress on a mechanical system.
3. Analyze the force and stress on a mechanical system.

Synopsis

Statics

Introduction to basic concepts in statics and mechanics as a study of physical sciences, system of units, scalars and vectors, free body diagram, forces system resultants and moments, equilibrium of a particle, equilibrium of a rigid body, structural analysis, center of gravity and centroid.

Material Mechanics

Introduction to various type of structures, type of supports, concepts and definition of stress, strains, torsion, shear force and bending moment, theory on axial loading, torsion, pure bending and beam deflection, and combination of loads.

BMCG 1253

DYNAMICS & MECHANISM

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Apply and analyze the principle of kinematics of a particle.
2. Apply and analyze the principle of kinematics of a rigid body
3. Understand and apply the concept of belt and gear system
4. Analyze gyroscopic effect and fundamental vibration problem of a system

Synopsis

This course consist of two parts, Dynamics and Mechanics of Machines. A Dynamics topic introduces the basis principle of mechanics of particles and rigid bodies, kinetics for systems of particles, kinematics of rigid bodies. For Mechanics of Machine, the course will cover of Friction-based power transmission system, balancing system including gyroscope and vibration. It will introduce to students the principles and simple applications.

BMCG 1523

ENGINEERING GRAPHICS AND CAD

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the engineering graphics fundamentals.
2. Construct technical drawing using manual sketching and computer aided design.
3. Communicate by using engineering drawings.

Synopsis

The course concentrates on manual drafting and Computer Aided Drafting (CAD) software. For manual drafting, students will be exposed to the basic drafting tools, techniques and the application in producing various types of engineering drawing. For computer aided design, CAD engineering drawing software is exercised to produce engineering drawing. The students will be exposed to CAD interface, editing commands, coordinate system, template preparation and layer in order to produce various types of engineering drawing.

BMCG 2372

FLUID MECHANICS

Learning Outcomes

Upon completion of this course, the student should be able to:

- Define basic concept in fluid mechanics.
- Apply fluid mechanics equations in solving problems related to fluid mechanics.
- Analyze problems related to fluid mechanics and solve them in a systematic manner.

Synopsis

This course introduces students the basic physical properties of fluid and the definition of pressure and head. Then, the derivation of hydrostatic equation and its application in pressure measurement, static forces analysis on immersed surface and buoyancy analysis are presented. For fluid dynamics, the introduction to fluid dynamics and fluid flow analysis followed by the derivation of flow equations, the application of energy equation and Bernoulli equation in the

calculation of flow velocity, discharge, and head lost in piping systems are discussed. In the final chapter, the knowledge of dimensional analysis and its application are instilled.

BMCG 3643

HYDRAULIC & PNEUMATIC SYSTEMS

Learning Outcome

- Explain the common hydraulic and pneumatic components, their use, symbols, and their applications in industry.
- Analyze mathematical models of hydraulic and pneumatic circuits to study the performance of the system.
- Design hydraulic and pneumatic system manually and using related computer software.
- Simulate and troubleshoot the circuit of the hydraulic and pneumatic system.

Synopsis

This course covers the introduction of hydraulic and pneumatic systems, types of pump, compressor, working principles, types of valve, actuator, and performance of the fluid power system. The understanding enhanced to the fluid power system ancillaries, sensors, fluid power circuit design, and electrical control. The computer software is used to design and simulate the fluid power circuit. The programmable logic controller has been utilized one step ahead to control the pneumatic robotic and mobile hydraulics.

BMCG 3653**THERMODYNAMICS & HEAT TRANSFER****Learning Outcomes**

After completion of the course, the students should be able to:

1. Describe basic terms of thermodynamics and use property tables to define the state of the systems.
2. Apply the concept of First Law of Thermodynamics in Closed Systems and Control Volumes.
3. Apply the concept of Second Law of Thermodynamics to determine the performance of heat engines, refrigerators and heat pumps.
4. Implement the concept of heat transfer such as conduction, convection and radiation through plates, cylinders and spheres including electronics system such as transistor and electric wire.

Synopsis

This course covers the basic concepts and definitions of engineering thermodynamics, energy, work and heat, properties of pure substances (relationships of P-v, T-v, P-T and Ts diagrams), First Law of Thermodynamics and Second Law of thermodynamics. It also will cover the different modes of heat transfer, definition of conduction, convection, radiation, thermal conductivity, Fourier's law of conduction, heat transfer coefficients, Newton's law of cooling, Stefan-Boltzman constant, emissivity of black bodies, heat transfer through plates, cylinders and spheres.

SERVICE COURSES (FKP)**BMFG 1113****ENGINEERING MATHEMATICS****Learning Outcomes**

Upon completion of this course, the student should be able to:

1. Describe the fundamental concepts of matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector-valued functions
2. Solve the mathematical problems that involve matrices, eigenvalues and eigenvector, complex numbers, interpolation, differentiation, integration and vector-valued functions by using an appropriate technique
3. Apply the knowledge of engineering mathematics to deal with the engineering problems

Synopsis

This course consists of three chapters: Functions of Several Variables, Multiple Integrals and Vector-valued Functions. The syllabus is developed by introducing the concepts of the functions with severable variables, integration and also vector-valued function, followed by learning various techniques in solving the problems and its application in physical and engineering fields.

BMFG 1213 ENGINEERING MATERIALS

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the basic concepts of engineering materials in terms of interatomic bonding and crystal structure.
2. Analyze the properties of engineering materials based on its structure.
3. Describe the processing methods for engineering materials.

Synopsis

This course introduces basic concepts of engineering materials that covers introduction to engineering materials, interatomic bonding, crystalline structure and imperfections and diffusion in solid. Introduction to the binary phase diagrams are also provided. Explanation on different types of engineering material (i.e. metal, ceramic, polymer, composites and functional), its mechanical properties, basic processing and applications are also included.

SERVICE COURSES (FPTT, PBPI & CO-CURRICULUM UNIT) BTMW 4012 ENTREPRENEURSHIP TECHNOLOGY

Learning Outcomes

In the end of the course, student will be able to:

1. Recognize the importance of entrepreneurship, the role of entrepreneurship in today's society, and the technical knowledge of the entrepreneurial process.
2. Explain the basic concepts of interdisciplinary competences in management, and create technology-based businesses.

3. Present a business plan project and develop an entrepreneurial profile.

Synopsis

The course provides students with technological knowledge about entrepreneurship as well as the skills to turn such knowledge into practice. The teaching and learning (T&L) activities include case study and field work with the aim to inculcate entrepreneurship values and entrepreneurship acculturation with a view to successfully launch and subsequently manage their enterprises. Students will be exposed with the support systems available or government agencies in starting new ventures, including the tactics commonly employed by entrepreneurs starting a business. The course allows students to critically evaluate business in terms of technical feasibility, investment potential, and risks.

BLHC 4032 CRITICAL AND CREATIVE THINKING

Learning Outcomes

In the end of the course, student will be able to:

1. Identify the basic principles of critical and creative thinking skills to solve everyday problems
2. Provide feedback on issues related to the development of critical and creative thinking skills
3. Solve problems of case studies on current issues related to their field of study
4. Analyze future market requirements and propose a solution based products.

Synopsis

This course is designed to expose students to the principles foundation in critical and creative thinking. Students will apply the methods of critical thinking and creative problem-solving through a student-centered approach including approaches of problems based learning (PBL). Students will be guided in the final project where the analysis of future market requirements will be implemented and proposed

solutions are based on the product market requirements from multiple perspectives and thinking outside the box.

BLHL 1012

MALAY COMMUNICATION I

Learning Outcome

Upon completion of this course, the student should be able to:

1. Memberikan respon terhadap perbualan biasa dan situasi-situasi lain.
2. Mengaitkan bunyi-bunyi atau ucapan dalam Bahasa Melayu dari segi nahu, fonologi dan kemahiran lisan tentang diri sendiri, keluarga, rakan-rakan and aktiviti harian.
3. Membincangkan secara mudah tentang sesuatu topik semasa.
4. Membina ayat dan bertutur dalam bahasa Melayu dengan gramatis.

Synopsis

Kursus ini memperkenalkan susuk tatabahasa bahasa Melayu. Pelajar didedahkan dengan aspek-aspek nahu, klausa, terminologi, binaan ayat, penjodoh bilangan dan unsur sastera. Diharapkan pelajar dapat menguasai pertuturan atau berkomunikasi dengan baik dan mudah berdasarkan kemampuan pelajar asing.

BLHL 1XX2

ARABIC

Learning Outcomes

In the end of the course, student will be able to:

1. Use the basic Arabic grammar correctly and apply the information from the text
2. Construct sentences and apply selected vocabulary in a report.
3. Demonstrate communication skills.

Synopsis

This basic Arabic course adopts the communicate approach and introduces the phonology, grammar, vocabulary and writing system. Students will be exposed to basic reading materials in the languages.

BLHL 1XX2

JAPANESE

Learning Outcomes

In the end of the course, student will be able to:

1. Use grammar and classify the features of Japanese phonology correctly.
2. Demonstrate correct pronunciation.
3. Construct sentences and demonstrate writing skills.

Synopsis

This course is designed for students who do not have any background in Japanese. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the

listening, speaking, reading and writing components. The grammar introduced is related to the language used daily by the Japanese. In addition, two types of Japanese language writing systems; Hiragana and Katakana are also introduced. Students are also exposed to elementary reading materials.

BLHL 1XX2 MANDARIN

Learning Outcomes

In the end of the course, student will be able to:

1. Demonstrate the ability to converse in Mandarin with correct and accurate pronunciation and intonation.
2. Use the rules of Chinese writing and the theory of word and sentence formation.
3. Interpret the information in the simple text.

Synopsis

This course is designed for students who do not have any background in Mandarin. It provides students with the knowledge to enable them to understand and communicate in the oral and written forms. This course encompasses the listening, speaking, reading and writing components. This course aims to help students to obtain enough exposure of the Mandarin phonetics (Han yu pin yin). The grammar introduced is related to the language used daily by Chinese. Particular care is also taken to ensure that the complexity of the dialogues is gradually developed using simple to complex sentences.

BLHW 1702

TAMADUN ISLAM DAN TAMADUN ASIA (TITAS)

Learning Outcomes

In the end of the course, student will be able to:

1. Menjelaskan konsep asas ketamadunan
2. Menghubunkait sejarah dengan kemajuan tamadun bangsa di dunia
3. Menganalisis isu dan cabaran peradaban dunia

Synopsis

Mata pelajaran ini menjelaskan tentang ilmu ketamadunan yang mencukupi pengenalan ilmu ketamadunan, Tamadun Melayu teras Tamadun Malaysia dan Tamadun Islam. Selain itu, turut dibincangkan berkaitan Tamadun China, Tamadun India serta isu-isu semasa dan masa depan dunia berbagai tamadun.

BLHW 1742

MALAYSIAN STUDIES

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Explain the political and economic structure of Malaysia.
2. Respond to the uniqueness of the Malaysian's historical and cultural heritage.
3. Compare the Malaysian experience and achievement with their home countries in various aspects.

Synopsis

By going through this course, students will be exposed to a wealth of information on Malaysia. They will gain information on Malaysian's historical background, political system and socio-economic structure. Additionally, this course highlights the Malaysian government's development plans and major policies in economic, industrial and socio-cultural aspects. It also gives emphasis on the attitude and commitment of the Malaysian government towards the regional and international issues as reflected in its foreign policy.

BLHW 2712

ETHNIC RELATIONS

Learning Outcomes

In the end of the course, student will be able to:

1. Menganalisis peranan hubungan etnik dan kepentingannya dalam proses pembangunan Malaysia.
2. Menghubungkan respons tentang isu dan cabaran etnik budaya di Malaysia.
3. Merumus isu-isu perpaduan dan cadangan untuk memperkasakannya di Malaysia.

Synopsis

Mata pelajaran ini memfokuskan perbincangan tentang konsep-konsep asas budaya dan hubungan etnik. Ia juga member pendedahan perkembangan hubungan etnik bagi mewujudkan masyarakat menurut acuan Malaysia. Selain itu, matapelajaran ini dapat member kefahaman dalam menangani cabaran global yang berkaitan hubungan budaya dan etnik di peringkat Malaysia.

BLHW 2752

MALAYSIAN CULTURE

Learning Outcomes

Upon completion of this course, the student should be able to:

1. Discuss issues related to Malaysian culture.
2. Present issues related to Malaysian culture.
3. Reflect the scenario of cultural diversity in Malaysia.
4. Describe an element in Malaysian culture

Synopsis

This course exposes international students to the socio-cultural background of Malaysia which includes ethnic composition, religions, traditions and values. Other elements like music, arts, cuisine, costume, ethnic games, celebrations and national festivals are also highlighted. Student Centered Learning (SCL) methods such as group discussion and presentation will be used in order to assist international students in developing their understanding and appreciation of Malaysian culture.

DEPARTMENT OF ELECTRICAL ENGINEERING

ACADEMIC

DR. MAASPALIZA BINTI AZRI

Head of Department / Senior Lecturer
Ph.D. in Power Electronics, University of Malaya, Malaysia.

M.Eng. (Power), UPM
B.Eng. (Electrical Engineering), UiTM

Area of Interest : *Power Electronics Converter, Renewable Energy*

✉ : maaspaliza@utem.edu.my

☎ : 270 2185

🏠 : C/1-3 & A/2-20

DR. AZRITA BINTI ALIAS

Coordinator of Department / Senior Lecturer
Ph.D in Electrical Engineering, Universiti Malaya

M. Eng. (Electrical), UTM
B.Eng in Electrical (Control & Instrumentation), UTM

Area of Interest : *Control Design & Application, Power Converters*

✉ : azrita@utem.edu.my

☎ : 270 2160

🏠 : A/1-3

DATUK PROF. DR. MOHD RUDDIN BIN AB. GHANI FASCI

Professor

Ph.D in System & Control, UMIST, UK

M.Sc. in System Engineering, University of London

B.Eng. in Electrical Engineering

Area of Interest : *Control System Engineering*

✉ : dpruddin@utem.edu.my

☎ : 270 2172

🏠 : A/2-5

PROF. DR. Ir. MARIZAN BIN SULAIMAN

Director of CRIM / Professor

Ph.D, M.Sc., B.Sc., in Electrical Engineering
University of Missouri-Columbia (UMC), USA

Area of Interest : *Power System Modeling, Control and Automation, Energy Efficiency and E-Learning*

✉ : marizan@utem.edu.my

☎ : 270 1304

🏠 : B/1-21

PROFESSOR. DR. ZULKIFILIE BIN IBRAHIM

Deputy Vice Chancellor / Professor

Ph.D (Power Electronics & Control), Liverpool John Moores University

B.Eng. (Electrical Engineering), UTM

Area of Interest : *Power Electronics, Electric Motor Drives, Fuzzy Logic, Embedded Control Design & Application*

✉ : drzulkifilie@utem.edu.my

☎ : 270 2784

🏠 : C/1-14 & A/1-19

ASSOC. PROF. Ir. DR. MD NAZRI BIN OTHMAN

Dean / Associate Professor

PhD in Electrical Eng., Uni. Of Nottingham, United Kingdom

M.Sc. Electrical Engineering, University of Nottingham, UK

B.Sc. Electrical Engineering, Memphis State University, USA

Area of Interest : *Design & Analysis of Electric Machines, Electric Motor Drives*

✉ : nazri@utem.edu.my

☎ : 270 2111 / 2114

🏠 : C/1-14 & A/1-5

ASSOC. PROF. Ts. DR. MOHD LUQMAN BIN MOHD JAMIL

Deputy Dean (Academic) / Associate Professor

PhD in Electrical Engineering, The University of Sheffield, UK

M.Sc. in Electrical Power Engineering, University of Newcastle upon Tyne, UK

B.Eng. in Electrical Engineering, UiTM

Area of Interest : *Design, Analysis & Control of Electric Machines*

✉ : luqman@utem.edu.my

☎ : 270 2186

🏠 : C/1-15 & A/3-20

ASSOC. PROF. DR. HIDAYAT BIN ZAINUDDIN

Deputy Dean (Student Development) / Associate Professor

Ph.D (Univ. of Southampton)

MSc. (Univ. of Strathclyde)

B.Eng. (UTM)

Area of Interest : *High Voltage Insulation, Condition Monitoring and Finite Element Modelling*

✉ : hidayat@utem.edu.my

☎ : 270 2125

🏠 : B/1-2 & B/3-20

ASSOCIATE PROF. Ir. DR. ROSLI BIN OMAR
Associate Professor
Ph.D in Electrical Engineering
M.Sc. in Electrical and Electronic
B.Eng in Electrical
Area of Interest : Power Quality, Power System,
Power Electronics and Renewable Energy
✉ : roslomar@utem.edu.my
☎ : 270 2137
📠 : A/G-20

ASSOCIATE PROF. Ir. DR. GAN CHIN KIM
Associate Professor
PhD Imperial College London
M.Eng. (Electrical Engineering), UTM
B.Eng. (Electrical Engineering), UTM
Area of Interest : Power Distribution Network
Planning, Integration of Disributed Technologies and
Solar PV System
✉ : ckgan@utem.edu.my
☎ : 270 1310
📠 : A/2-19

ASSOCIATE PROF. Ir. Ts. DR. ABDUL RAHIM BIN ABDULLAH
Associate Professor
PhD Electrical Engineering UTM
M.Sc., B.Eng. in Electrical Engineering, UTM
Area of Interest : Power Electronics & Drives,
Signal Processing
✉ : abdulr@utem.edu.my
☎ : 270 1313
📠 : A/3-2

ASSOCIATE PROF. DR. KASRUL BIN ABDUL KARIM
Associate Professor
PhD Electrical Engineering, University of Nottingham,
UK
M.Sc. Real Time Power Electronics & Control
Systems, University of Bradford, UK
B.Eng. Electrical & Electronics Eng, UMS
Area of Interest : Power Electronics & Drives
✉ : kasrul@utem.edu.my
☎ : 270 2187
📠 : B/2-3

ASSOCIATE PROF. DR. TAY CHOO CHUAN
Associate Professor
Ph.D Mathematics , UKM
M.Sc (Quality and Productivity Improvement), UKM
B.Sc (Hons) Mathematics, UKM
Area of Interest : Mathematics, Quality &
Productivity Improvement.
✉ : tay@utem.edu.my
☎ : 270 2164
📠 : B/3-18

ASSOCIATE PROF. DR. RAJA NOR FIRDAUS KASHFI RAJA OTHMAN
COE-CeRIA Manager/ Associate Professor
PhD in Electrical Engineering, UPM
M.Sc in Electrical Engineering, UPM
B. Eng in Electrical & Electronics, UPM
Area of Interest : Applied Magnetic, Electrical
Machine, Magnetic Sensor & Drives
✉ : norfirdaus@utem.edu.my
☎ : 270 2210
📠 : B/2-2

ASSOCIATE PROF. DR. ROZAIMI BIN GHAZALI
Associate Professor
Ph.D in Electrical Engineering, Universiti Teknologi
Malaysia
B.Eng. in Electrical Engineering (Control and
Instrumentation), Universiti Teknologi Malaysia
Area of Interest : Adaptive Robust Control, Sliding
Mode Control, System Identification, Hydraulic and
Pneumatic Systems, Motion Control, Biomedical
Engineering
✉ : rozaimi.ghazali@utem.edu.my
☎ : 270 8087
📠 : A/3-16

DR. MUHAMMAD NIZAM BIN KAMARUDIN
Senior Lecturer
Ph.D in Electrical Engineering, Malaysia
M.Sc. Automation and Control, United Kingdom
B.Eng. (Hons.) Electrical, Malaysia
Area of Interest : Stability Analysis and Control of
Dynamical System
✉ : nizamkamarudin@utem.edu.my
☎ : 270 2197
📠 : A/2-4

DR. ELIA ERWANI BINTI HASSAN
Senior Lecturer
Ph.D in Electrical Engineering, UiTM
M.Eng. (Electrical Engineering), UTM
B.Eng. (Electrical Engineering), UiTM
Area of Interest : Power Systems
✉ : erwani@utem.edu.my
☎ : 270 2249
📠 : A/1-21

DR. AIDA FAZLIANA BINTI ABDUL KADIR
Senior Lecturer
Ph.D (Electrical Engineering), UKM
M.Eng. (Electrical Engineering), UTM
B.Eng. (Electrical Engineering), UTM
Area of Interest : Power Quality, Distributed Generation and Optimization.
✉ : fazliana@utem.edu.my
☎ : 270 2132
📠 : A/1-2

DR. FAIRUL AZHAR BIN ABDUL SHUKOR
Senior Lecturer
D. Eng in Electrical Machine Design, Shinshu University, Japan.
M.Sc. (Electrical Power Engineering), UPM
B.Eng. (Electrical and Electronic Engineering), UPM
Area of Interest : Power Electronics, Electrical Machine Design and Drives
✉ : fairul.azhar@utem.edu.my

📠 : B/2-8

MOHAMAD RIDUWAN BIN MD NAWAWI

Senior Lecturer

M.Sc. in Advanced Control and System

Engineering, University of Manchester, UK

B.Eng. (Hons) Electronic Engineering, University of Surrey, UK

Area of Interest : Control System Engineering, Nonlinear System, Process Control

✉ : riduwan@utem.edu.my

☎ : 270 2176

📠 : B/3-10

NUR ASMIZA BINTI SELAMAT

Lecturer

M.Eng (Electrical-Mechatronic & Automatic Control), UTM

Bachelor of Engineering (Electrical), UTM

Area of Interest : Control system engineering, Modeling, Optimization technique

✉ : nurasmiza@utem.edu.my

☎ : 270 2179

📠 : A/G-16

NUR HAZAHSHA BINTI SHAMSUDIN

Senior Lecturer

M.Eng in Engineering (Electrical Energy and Power System), UM

B.Eng. in Electrical Engineering (Power), UiTM

Dip. In Electrical Engineering (Communication) UiTM

Area of Interest : Distribution System Optimization and Power Quality

✉ : nurhazahsha@utem.edu.my

☎ : 270 2152

📠 : A/1-1

MOHAMAD FAIZAL BIN BAHAROM

Senior Lecturer

M.Eng Electrical Engineering UTM

B.Eng. of Electrical Engineering (Power Industrial), UTeM

Area of Interest : Power system, Power System Protection and High Voltage

✉ : mohamad.faizal@utem.edu.my

☎ : 270 2151

📠 : B/2-1

MOHAMAD FANI BIN SULAIMA

Senior Lecturer

M.Eng. in Engineering (Industrial Electronic & Control), UM

B.Eng in Electrical & Electronic Engineering (Distribution Power System), Tokai University Japan

Area of Interest : Distribution System Optimization, Safety Instrumented Automation System and PLDS

✉ : fani@utem.edu.my

☎ : 270 2251

📠 : C/3-3

MOHD HAFIZ BIN JALI

Senior Lecturer

M.Eng. Industrial Electronic & Control, UM

B.Eng. (Electrical), UiTM

Area of Interest : Bio signal processing, Human assist technology and Artificial Intelligent

✉ : mohd.hafiz@utem.edu.my

☎ : 270 2243

📠 : B/3-9

Ir. FAUZAL NAIM BIN ZOHEDI

Lecturer

📠 : B/G-1

Ir. IMRAN SUTAN BIN CHAIRUL

Senior Lecturer

Master in Engineering (Electrical) UNITEN

B.Eng. (Hons) in Electrical Engineering (Industrial Power) UTeM.

Area of Interest: Transformer Diagnostics and Condition Monitoring, Renewable Energy and Smart Grid

✉ : imransc@utem.edu.my

☎ : 270 2206

📠 : B/G-9

TARMIZI BIN AHMAD IZZUDDIN

Lecturer

M.Eng. Universiti Malaya.

Bsc. Eng (Electronic Control System Engineering), University of Shimane University, Japan

Diploma in Electronic Control System Engineering, Kumamoto National College of Technology, Japan

Area of Interest : Electronic Control System, Artificial Intelligence

✉ : tarmizi@utem.edu.my

☎ : 270 2177

📠 : A/3-15

LOI WEI SEN

Senior Lecturer

M. Sc Engineering Mathematics (UTM)

B. Sc. Mathematics (UTM)

Area of Interest : Nonlinear wave & Solitons, Optical Solitons, Applied Mathematics

✉ : loiws@utem.edu.my

☎ : 270 2209

📠 : B/G-19

DEPARTMENT OF MECHATRONIC ENGINEERING

ACADEMIC

DR. NIK SYAHIRM BIN NIK ANWAR

Head of Department/ Senior Lecturer
Lecturer
Ph.D in Electrical (sensor and Instrumentation), USM
M.Sc. in Mechatronics, University of Applied Science
Aachen, Germany
B.Eng. (Hons) in Mechatronics (FH HN)
Area of Interest: *Microwave imaging, Sensor & Instrumentation.*

✉ : syahrim@utem.edu.my
☎ : 270 2221
📠 : A/3-21

ASSOCIATE PROF. Ir. DR. AHMAD ZAKI BIN SHUKOR

Associate Professor
Ph.D (Robotics and Motion Control), Yokohama National University, Japan
M.Eng. (Electrical Power Engineering) University of South Australia, Adelaide
B.Eng. (Electrical-Mechatronics Engineering), UTM
Area of Interest: *Embedded Control Design & Application, Mobile Robots*

✉ : zaki@utem.edu.my
☎ : 270 2211
📠 : B/2-24

ASSOCIATE PROF. DR. MARIAM BINTI MD. GHAZALY

Deputy Director of CAES / Associate Professor
D. Eng. & M. Eng. (Mechano-Micro Engineering), Tokyo Institute of Technology, Japan
M. Eng. (Electrical-Mechatronics and Automatic Control Engineering), UTM
B. Eng. in Electrical Engineering, UTM

Area of Interest: *Precision Motion Systems, Control System, Actuator Design*

✉ : mariam@utem.edu.my
☎ : 270 2216
📠 : A/2-6

ASSOCIATE PROF. DR. MOHD SHAHRIEEL BIN MOHD ARAS

COE-CeRIA Coordinator / Associate Professor
Ph.D in Electrical Engineering, UTM
M.Eng. Electrical Engineering (Mechatronic and Automatic Control), UTM
Bachelor of Electrical Engineering (Hons), UiTM
Diploma in Electrical Engineering (Electronics), UiTM
Area of Interest: *Underwater Robotics, Fuzzy logic, Neural Network, and System Identification*

✉ : shahrieel@utem.edu.my
☎ : 270 2215
📠 : A/G-21

ASSOCIATE PROF. Ts. DR. MUHAMMAD FAHMI BIN MISKON

Director of PPPA / Associate Professor
Ph.D in Electrical and Computer Engineering (Robotics), Monash University, Australia
M.Sc. in Electrical Engineering (Mechatronics) University of Newcastle, UK
B.Eng. in Electrical Engineering (Mechatronics), UTM

Area of Interest: *Wearable robots, Artificial intelligence*

✉ : fahmimiskon@utem.edu.my
☎ : 270 1545
📠 : B/2-23

ASSOCIATE PROF. DR. CHONG SHIN HORNG

Associate Professor
Ph.D in Mechano-Micro Engineering (Precision & Control Engineering), Tokyo Institute of Technology, Japan
M.Eng in Electrical Engineering, UTM
B.Eng in Electrical Engineering (Instrumentation & Automation), UTM

Area of Interest: *Motion Control, Mechatronics Application, Precision Engineering*

✉ : horng@utem.edu.my
☎ : 270 2159
📠 : A/2-21

Ir. DR. ANUAR BIN MOHAMED KASSIM

Senior Lecturer
D.Eng in System Innovation Engineering, Tokushima University, Japan
M.Eng in System Innovation Engineering, University of Tokushima, Japan
B.Eng. in Electrical Electronic Engineering, Ehime University, Japan
Area of Interest: *Robotics and Automation, Precision Agriculture, Smart Farming, System Innovation, Sensor and Instrumentation, Control System.*

✉ : anuar@utem.edu.my
☎ : 270 2227
📠 : B/3-3

DR. FARIZ BIN ALI @ IBRAHIM

Senior Lecturer
Ph.D (Robotics), Yokohama National University), Japan
M.Eng. (Electrical Engineering), University of South Australia, Adelaide
B.Eng. (Electrical Engineering-Mechatronics) UTM

Area of Interest: *Robotics, Humanoid*

✉ : fariz@utem.edu.my
☎ : 270 2212
📠 : B/2-23

DR. HAIROL NIZAM BIN MOHD SHAH

Senior Lecturer
Ph.D in Electrical (Mechatronic), UTeM
M.Sc. in Electrical Engineering (Mechatronics), UTeM
B.Eng. in Electric-Electronic Engineering, UMS
Diploma in Electric-Electronic Engineering, UTM
Area of Interest: Vision System, Image Processing, Robotics

✉ : hnizam@utem.edu.my
☎ : 270 2223
📠 : A/G-19

DR. LOH SER LEE

Senior Lecturer
Ph.D in Mathematics(UTM)
M.Sc in Mathematics (UTM)
B.Eng in Industrial Mathematics(UTM)
Area of Interest: Computational Mathematics, Optimization, Channel Assignment

✉ : slloh@utem.edu.my
☎ : 270 2158
📠 : A/2-15

ASSOCIATE PROF. DR. MUHAMMAD HERMAN BIN JAMALUDDIN

Associate Professor
Doctor of Engineering (Haptics), Yokohama National University, Japan
M.Sc. in Electrical Engineering (Mechatronic System), UTeM
B.Eng. in Electrical Engineering (Mechatronics), UTM
Area of Interest: Haptics, Mechatronic, Embedded System, Robotic, Electronics, Information & Communication Technology (ICT) Design & Application

✉ : herman@utem.edu.my
☎ : 270 2213
📠 : C/1-4 & B/1-23

DR. NURDIANA BINTI NORDIN @ MUSA

Senior Lecturer
Ph.D. in Mechatronics Engineering, University of Auckland, New Zealand
M.Sc in Mechatronics Engineering, University of Siegen, Germany
B.Sc in Mechatronics Engineering, UIAM
Area of Interest: Computer vision, Stochastic estimation, Machine learning, Biomechanics.

✉ : nurdiana@utem.edu.my
☎ : 270 2220
📠 : A/2-3

DR. NUR ILYANA BINTI ANWAR APANDI

Senior Lecturer
Ph.D (Electrical and Information Engineering), The University of Sydney, Australia
M.Sc. in Modelling in Applied Mathematics, University of East Anglia, UK
B.Sc. (Industrial Mathematics), UTM
Area of Interest: Applied Mathematics, Mathematical Modelling, Wireless Telecommunication, Computational Mathematics

✉ : ilyana@utem.edu.my
☎ : 270 2230
📠 : A/1-22

DR. SAIFULZA BIN ALWI @ SUHAIMI

Senior Lecturer
Ph.D in Electrical & Comp. Engineering, Yokohama National University, Japan.
M.Eng., Inst. Of Tech. Japan
B.Eng. (Hons) Control Engineering & Science, Kyushu Inst. of Tech.
Area of Interest: Industrial Automation & Discrete Event System

✉ : saifulza@utem.edu.my
☎ : 270 2166
📠 : B/2-5

Ir. DR. SHARIN BIN AB. GHANI

Senior Lecturer
Ph.D in Electrical Engineering (UTM)
M.Eng. in Electrical Engineering, UNITEN
B.Eng. (Hons) in Electrical Engineering, UTeM
Area of Interest: Transformer Diagnostics and Condition Monitoring, Renewable Energy and Smart Grid

✉ : sharinag@utem.edu.my
☎ : 270 2203
📠 : B/G-10

AINAIN NUR BINTI HANAFI

Senior Lecturer
M.Sc. in Control System, University of Sheffield
B.Eng. (Electrical Engineering), Universiti Teknologi MARA
Area of Interest: Control systems, nonlinear systems, fault tolerant control

✉ : ainain@utem.edu.my
☎ : 270 2165
📠 : A/1-4

ZAMANI MD SANI

Senior Lecturer
M.Sc. Electrical & Electronics Engineering (Real-Time Vision System), USM
B.Eng. (Electrical & Electronics Engineering), USM
Area of Interest: Image Processing and Embedded System

: zmaisani@utem.edu.my
 : 270 2232
 : A/3-16

FADILAH BINTI ABDUL AZIS

Lecturer
M.Sc. in Mechatronics, University of Siegen, Germany
B.Eng. (Hons) in Mechatronics Engineering, UIAM
Area of Interest: Nonlinear Control and Unmanned Vehicle System

: fadilah@utem.edu.my
 : 270 2219
 : A/2-9

MOHD BAZLI BIN BAHAR

Lecturer
M.Eng. in Mechatronics Engineering, UTaM
B.Eng. in (Mechatronics Engineering with honours, UTaM

: mohdbazli@utem.edu.my
 : 270 2238
 : B/1-10

NORAFIZAH BINTI ABAS

Lecturer
M.Sc. in Mechatronics Engineering, IIUM
B.Eng. (Hons) in Mechatronics Engineering, IIUM
Area of Interest: Rehabilitation, Engineering & Assisitive Technology, Nonlinear Control and Autonomous Agent.

: norafizahabas@utem.edu.my
 : 270 2229
 : B/3-17

NURUL FATIHA BINTI JOHAN

Lecturer
M.Sc. in Mechatronics Engineering, UIA
B.Eng. (Mechatronic Engineering), UTaM
Area of Interest: Control System, Mechatronic System, Electromechanical System, Fuzzy Logic, Embedded System & Application

: nfatiha@utem.edu.my
 : 270 2233
 : C/1-11

DR. MOHD FAID BIN YAHYA

Lecturer
Ph.D (Robotics), Universiti Sains Malaysia,
M.Sc. (Mechatronics Engineering), IIUM
B.Eng. (Mechatronics Engineering), IIUM
Area of Interest: Vision-Based Robot Control, Robotics, Machine Vision, Control System Discrete Event System

: faid@utem.edu.my
 : 270 2253
 : B/2-8

ASSOCIATE PROF. DR. AHMAD ANAS BIN YUSOF

Associate Professor
Ph.D in Mechanical and Civil Engineering, Gifu Universiti, Japan
M.Eng in Mechanical, Universiti Teknologi Malaysia
B.Eng in Mechanical, Universiti Teknologi Malaysia
Area of Interest: Robotics, Mechatronics, Thermal-Fluids

: anas@utem.edu.my
 : 270 4356
 : B/3-1

DR. MOHD KHAIRI BIN MOHAMED NOR

Senior Lecturer
Ph.D in Information system, Yamagata University
M.Sc. in Control System, The university of Sheffield
B.Eng in Mechanical System, Takushoku University
Area of Interest: Control Engineering, Robotic

: khairi@utem.edu.my
 : 270 4473
 : B/3-21

STUDY LEAVE

NURSABILLILAH BINTI MOHD ALI

Senior Lecturer

M.Sc. in Mechatronics Engineering, UIA

B.Eng. (Hons) in (Mechatronics Engineering)

Dip. in (Electronics Engineering), UTeM

Area of Interest: *Image Processing, Intelligent System, Pattern Recognition*

✉ : nursabilillah@utem.edu.my

☎ : 270 2234

🏠 : B/1-10

MOHD ZAMZURI BIN AB. RASHID

Senior Lecturer

B.Eng. (Hons) in Mechatronics Engineering,

UIAM

M.Sc. in Mechatronics Engineering, UIA

Area of Interest: *Control system, Robotics, System modelling.*

✉ : zamzuri@utem.edu.my

☎ : 270 2228

🏠 : A/G-8

NUR MAISARAH BINTI MOHD SOBRAN

Lecturer

M.Eng. Electrical Engineering (Mechatronics

and Automatic Control), UTM

B.Eng. (Hons) Electrical (Electrical-

Mechatronic) UTM

Area of Interest: *Artificial Intelligent Control, Robotics and Electrical Car.*

✉ : nurmaisarah@utem.edu.my

☎ : 270 2237

🏠 : B/1-17

DEPARTMENT OF DIPLOMA STUDIES

ACADEMIC

DR. SAZUAN NAZRAH BINTI MOHD AZAM
Lecturer/ Head of Department Diploma Studies
Ph.D in Control System (Model Predictive Control), DTU, Denmark
Master of Science in Advanced Process Control, Universiti Teknologi Petronas
B.Eng. Electrical Engineering, UiTM
Area of Interest: Control System & Instrumentation
✉ : sazuan@utem.edu.my
☎ : 270 2171
📠 : B/2-16

DR. AIMIE NAZMIN BIN AZMI
Senior Lecturer/ Post Graduate Coordinator
Ph.D in Renewable Energy (Uni. Agder, Norway)
M.Eng. Sc. Energy System, The University of New South Wales, Sydney
B.Eng. (Hons) Electrical Engineering (Industrial Power), UTeM
Area of Interest: Zero Energy Building, Renewable Energy, Energy System
✉ : aimienazmin@utem.edu.my
☎ : 270 2145
📠 : B/3-1

DR. JUNAINAH BT SARDI
Lecturer
Ph.D in Electrical Engineering (Energy Storage), University of Queensland, Australia
Master of Science (Electrical Engineering), UPM
B.Eng. (Electrical Engineering), UTM
Area of Interest: Energy storage, Renewable energy, Distribution system
✉ : junainah@utem.edu.my
☎ : 270 2139
📠 : B/G-22

ALIAS BIN KHAMIS
Senior Lecturer
M.Sc. in Electrical Engineering, UPM
B.Eng. in Electrical Engineering, UiTM
Area of Interest:
✉ : alias@utem.edu.my
☎ : 270 2135
📠 : A/G-2

IRMA WANI BINTI JAMALUDIN
Senior Lecturer
Master of Science (Mathematics), UTM
Bachelor of Science (Hons) Industrial Mathematics, UTM
Area of Interest: Algebra and Analysis, Applied Mathematics
✉ : irma@utem.edu.my
☎ : 270 2218
📠 : A/G-5

AHMAD AIZAN BIN ZULKEFLE
Senior Lecturer
M.Sc. (Electrical Engineering & Power Electronics), University of Bradford, UK
B.Eng. (Electrical Engineering), UTM
Dip. (Electrical Power), UTM
Area of Interest: Fabrication and Characterization of Thin Film Solar Cell
✉ : aizan@utem.edu.my
☎ : 270 2196
📠 : B/3-2

LIM WEE TECK
Lecturer
Master of Science in Electrical Engineering, UTeM
B.Eng. in Electrical Engineering (Control, Instrumentation & Automation), UTeM
Area of Interest: Machine Vision, Industrial Automation, Embedded System
✉ : limwt@utem.edu.my
☎ : 270 2183
📠 : B/G-19

Ir. MOHD SAFIRIN BIN KARIS
Senior Lecturer
M.Eng. (Electrical - Mechatronics & Automatic Control), UTM
B. Eng. (Electrical Engineering - Telecommunications), UTM
Area of Interest: Telecommunications, and Control, Instrumentations and Automations
✉ : safirin@utem.edu.my
☎ : 270 2173
📠 : B/1-8

MOHD FAIRUS BIN ABDOLLAH

Lecturer
M.Eng. (Electrical - Mechatronics & Automatic Control), UTM
B.Eng. (Electrical), UTM

Area of Interest: Control & Instrumentation

✉ : mfairus@utm.edu.my
☎ : 270 2167
📠 : B/G-21

MOHD SAIFUZAM BIN JAMRI

Lecturer
M.Eng. in Electrical Engineering (Power), UTM
B.Eng. (Hons) in Electrical Engineering, UTeM

Area of Interest: Power Electronics & Drives

✉ : saifuzam@utm.edu.my
☎ : 270 2201
📠 : A/2-17

AINE IZZATI BINTI TARMIZI

Lecturer
Master of Science (Electrical Power Engineering with Business) University of Strathclyde, Glasgow, UK
B.Eng. (Electrical Engineering), UTM

Area of Interest: Power System, High voltage and EMC

✉ : aineizzati@utm.edu.my
☎ : 270 2154
📠 : A/3-8

ANIS NIZA BINTI RAMANI

Lecturer
M.Eng. in Electrical Engineering (Power), UTM
B.Eng. in Electrical Engineering (Power Industry), UTeM

Area of Interest: Power system, High Voltage and Grounding

✉ : anisniza@utm.edu.my
☎ : 270 2140
📠 : A/2-10

DR. WAN MOHD BUKHARI BIN WAN DAUD

Lecturer
Phd in Automatic Control and Systems Engineering, The University of Sheffield
M. Sc.(Electrical Engineering), UTM
B.Eng. in Electrical Engineering (Medical Electronics) , UTM

Area of interest: Bio Instrumentation and Signal Processing

✉ : bukhari@utm.edu.my
☎ : 270 2184
📠 : B/2-17

MOHAMAD NA'IM BIN MOHD NASIR

Senior Lecturer
Master of Engineering (Electrical-Power), UTM

B.Eng. (Electrical Engineering), UTM

Area of Interest: Renewable Energy, Power Systems

✉ : mohamad.naim@utm.edu.my
☎ : 270 2156
📠 : B/2-15

MOHD RUSDY BIN YAACOB

Senior Lecturer
M.Sc. in Mechatronics, University of Siegen, Germany
B.Eng. (Hons) in Mechatronics Engineering, UIAM

Area of Interest: Experimental Fluid Mechanics, Turbulence theory, Instrumentation & Measurements

✉ : rusdy@utm.edu.my
☎ : 270 2363
📠 : A/3-17

HAZRIQ IZZUAN BIN JAAFAR

Senior Lecturer
M.Eng. (Electrical - Mechatronics and Automatic Control), UTM

B.Eng. (Electrical - Power), UTM

Area of Interest: Control System, Power System & Optimization Techniques

✉ : hazriq@utm.edu.my
☎ : 270 2178
📠 : A/3-1

NORHASLINDA BINTI HASIM

Lecturer
M.Eng. (Electrical - Mechatronics & Automatic Control), UTM
B.Eng. (Hons) Electrical Engineering (Instrumentation), UiTM

Area of Interest: *Motion Control & Precision Engineering*

✉ : norhaslinda@utem.edu.my

☎ : 270 2170

📠 : B/G-19

FACILITIES & INFRASTRUCTURE

FACILITIES & INFRASTRUCTURE

FKE'S BUILDING MAP

BLOCK A

Ground Floor
1st Floor
2nd & 3rd Floor

Lecturers' rooms, Lecture Room 2
Ladies prayer room, Lecturer rooms, Seminar room
Lecturer rooms

BLOCK B

Ground Floor
1st Floor
2nd Floor
3rd Floor

Lecturers' rooms, Lecture Room 1
Lecturers' rooms, Discussion Room 1 & 2
Lecturers' rooms, Discussion room 4 & 5
Lecturers' rooms

BLOCK C

Ground Floor
1st Floor
2nd Floor
3rd Floor

Faculty lobby, Lecturers' rooms
Faculty administration office, Dean, Deputy Dean/Head of Department
FKE meeting room, ISO files room, waiting room.
Lecturers' rooms.

BLOCK D

Ground Floor
1st Floor
2nd Floor

Power electronic and drive lab.
Robotic and industry automation research lab, Mechatronic and CIA lab.
Electrical Technology lab 1, Post graduate room 1

BLOCK E

Ground Floor
1st Floor
2nd Floor
3rd Floor

Power systems Labs 1 & 2, Pneumatic and hydraulic Lab, Power electronic lab, Lecture Rooms 3 & 8, Students prayer room (male)
Power electronic and drive lab research room, Post graduate room 2, Final year project room, Lecture Rooms 4,9 & 10, Students prayer room (female), CIA simulation lab, Energy Efficiency lab.
Power electronic applications lab, Power electronic simulation lab, Lecture rooms 5, 10 & 12 Mechatronic system lab, Control system lab.
Energy and power system lab, Lecture Rooms 6, 13 & 14, Briefing room 7, PLC & Process control lab, Robotic and automation lab.

BLOCK F

Ground Floor
2nd Floor
3rd Floor

Power industry workshop, Engineering practices workshop, Electrical machine labs 1 & 2, High voltage lab, Generation and transmission lab, Protection system lab, Machine drive lab.
Electrical & Electronic Labs 1 & 2, Lecture Room 15 & 16
Microprocessor Lab, Instrumentation and DSP Lab, Motion Control Research Lab.

LIST OF FKE LABORATORY

TEACHING AND LEARNING LABORATORIES (UNDERGRADUATE)

NO	LABORATORY / WORKSHOP NAME	ROOM NO.	EQUIPMENTS
1	Power system Laboratory 1	ME1 (E/G-2)	TERCO Transmission System Training Set, TERCO Power Utilization System Training Set
2	Power system Laboratory 2	ME2 (E/G-7)	TERCO Generation System Training Set
3	Energy Efficiency Laboratory	ME3 (E/1-19)	Various tools & equipment of energy efficiency studies
4	Protection system Laborator	ME4 (F/G-27)	LABVOLT Protection System Training Set, PC
5	Electrical & Electronic Laboratory 1	ME5 (F/2-4)	PCs, Function Generators, Oscilloscopes, Digital Lab Trainers, Multimeters
6	Electrical & Electronic Laboratory 2	ME6 (F/2-15)	PCs, Function Generators, Oscilloscopes, Digital Lab Trainers, Multimeters
7	Electrical Technology Laboratory 1	ME7 (D/2-11)	LABVOLT meters, loads, tools & equipments for electrical technology studies
8	Control, Instrumentation & Automation(CIA) Simulation Laboratory	ME12 (E/1-14)	PC c/w Matlab & Multisim, Micro-Box
9	PLC & Process Control Laboratory	ME13 (E/3-13)	OMRON PLC Training Set, Test Panel DOL Motor Starter, Test Panel STAR-DELTA Motor Starter and various equipments of automation
10	Microprocessor Laboratory	ME14 (F/3-8)	PCs, Oscilloscopes, Multitester, Mechatronics project kit, PIC Training Kit
11	Instrumentation and DSP Laboratory	ME15 (F/3-5)	LORENZO CBT Modul, Multimeters, function generators, digital lab trainer, analog oscilloscope, magnaprobe, Galvanometer, Decade resistor, Decade Inductor

Power System Lab 2

Electrical Technology Lab

12	Control System Laboratory	ME11 (E/2-21)	Modular Servo System, Matlab software, Digital Oscilloscope.
13	Robotic and Automation Laboratory	ME17 (E/ 3-18)	Rhino robot trainer, Scara robot trainer, etc,
14	Pneumatic and Hydraulic Laboratory	ME18 (E/G-15)	BOSCH REXROTH Pneumatic & Hydraulic System Training Set
15	Power Electronic Laboratory	ME19 (E/G-20)	PCs, oscilloscope digital Tektronix and various equipments for power electronics studies, Power Electronics training system model labvolt
16	Power Electronic Simulation Laboratory	ME20 (E/2-7)	PCs & LabView software
17	Power Electronic Applications Laboratory	ME21 (E/2-2)	PCs, ERACS & PSCAD software
18	Electrical Machine Laboratory 1	ME22 (F/G-14)	LORENZO electrical machines
19	Electrical Machine Laboratory 2	ME23 (F/G-11)	Dissectible machine
20	Power Electronic workshop	BE25 (F/G-4)	Wiring bays, tools and equipments for domestic & motor control/starter wiring
21	Mechatronic and CIA Workshop	BE26 (D/1-10B)	CIM System, AGV, CNC machine, OMRON machine vision, robot arm training set
22	Engineering Workshop/ CERIA Lab	ME27 (F/G-6)	Hitachi bench drill, welding set, grander, break cutter, pallet jack, spanner Canady
23	Components Store	D/G-11	Electronics Components
24	Mechatronic System Laboratory	ME29 (F/3-2)	PCB machine

RESEARCH LABORATORIES (POSTGRADUATE)

NO	LABORATORY NAME	ROOM NO.	RESEARCH FIELD
1	Robotics & Industrial Automation Research Laboratory	ME27 (F/G – 6)	- Assistive/ rehabilitation robotics - Mobile robot navigation - Artificial Intelligence
2	Motion Control Research Laboratory	ME16 (E/2–16)	- Precision Motion Control - Control Theory - Precision Actuator Design - Robotics, Biped Robot
3	Underwater Technology Research Laboratory	ME9 (F/G–22)	- Remotely Operated Vehicle - Surface Vessel System - Underwater Sensory Technology
4	Power Electronics and Drives Research Laboratory	MP2 (E/1 -3)	- Direct Torque Control of Induction/PM machines. - Multilevel/Multiphase Inverters. - Power Converters for Battery Management Sys. & PV Applications
5	Electrical Machine Design Research Laboratory	D / G - 11	- Permanent magnet machine: Designs and Applications - Switched Reluctance and Bearingless motor. - Condition Monitoring of Electric Machines.
6	Electric Vehicle Drives Research Laboratory	BPS2 (E/1-4)	- Sensorless PMSM Drives - Electric Vehicle Drives using Dual-motor - Control - Five-Leg Inverter for Dual-machine Drives
7	Solar PV System and Smart Grid Research Laboratory	D / G - 11	- Solar PV System Design & Evaluation - Cost and Benefits of PV System Integration - Smart Grid Application
8	Energy and Power System Research Laboratory	MP3 (E/3-2)	- Optimization of electricity system - Energy Efficiency - Power System Planning and Operation
9	High Voltage Research Laboratory	ME10 (F/G-18)	- Breakdown in gases - Surface discharge - Atmospheric discharges & insulation
10	Advanced Digital Signal Processing Research Laboratory	ME24 (F/G-30)	- Neural feedback - Brain computer interface - Computer vision, graphics & visualization
11	Rehabilitation Eng. & Assistive Technology Research Laboratory	F/2-9	- Biomedical engineering - Biomechanics - Computational and information

CERIA Workshop

Machine Drive Lab

APPENDIX

APPENDIX A: STUDENT AUDIT FORM - DEK PROGRAM

INSTRUCTIONS TO STUDENTS (COMPULSARY FOR EACH SEMESTER)

- Students are required to keep record of their obtained grades for a given course for graduation purpose.
- Refer to SMP system to fill in your grades, GPA & CGPA.

APPENDIX B: STUDENT AUDIT FORM - BEKG PROGRAM

INSTRUCTIONS TO STUDENTS (COMPULSARY FOR EACH SEMESTER)

Instructions for the student :	1. Fill in the YELLOW HIGHLIGHTED SPACES - your details and grade obtained for each subjects up the current. 2. Fill in "EXEMPTED" for credit exempted subjects, "PASS" or "FAIL" for BEKU3695 INDUSTRIAL TRAINING and BLHC 4032 CRITICAL AND CREATIVE THINKING and left "INSERT GRADE" for subjects not yet taken. 3. Return the completed form to your academic advisor.
Instructions for the academic advisor :	1. Double confirm the information through the SMP system (Maklumat Kohort Pelajar). 2. Report the results/highlights any problem in regards to the audit to the program owner (HOD/TDA).

ACKNOWLEDGEMENT

The Faculty would like to extend our gratitude and appreciation to all who have contributed to the success of Academic Handbook 2019/2020 completion:

ASSOC. PROF. Ir. DR. MD NAZRI BIN OTHMAN
 ASSOC. PROF. Ts. DR. MOHD LUQMAN BIN MOHD JAMIL
 DR. MAASPALIZA BINTI AZRI
 DR. AZRITA BINTI ALIAS
 DR. NIK SYAHRIM BIN NIK ANWAR
 DR. SAZUAN NAZRAH BINTI MOHD AZAM
 ASSOC. PROF. DR. MARIAM BINTI MD GHAZALY
 DR. HAIROL NIZAM BIN MOHD SHAH
 DR. INTAN AZMIRA BINTI WAN ABDUL RAZAK
 Ir. FAUZAL NAIM BIN ZOHEDI
 MOHAMAD NA'IM BIN MOHD NASIR
 NOR-ALIZA BINTI IBRAHIM

And all of the parties involved.
